Introduction

The Consumer Price Index (CPI) measures the average change in the price paid by consumers for a fixed market basket of goods and services. It is usually based on household expenditure weights of the goods and services in the basket and their current market prices. The twelve CPI's (i.e., the CPI's of the 11 Regions and the CPI at Country Level) presented in this report are based on the results of the Household Income, Consumption and Expenditure Survey (HICES) conducted by the Central Statistical Agency in 2010/2011 from which expenditure weights are derived for major household goods and services of that period and adjusted using the December 2011 retail prices of the goods and services as a base period.

The December 2011 based CPI updates the previous CPI series (i.e. December 2006 based) and the newly selected baskets are more diversified and the weights are more accurate. It also showed various improvements and incorporates non-food index as an independent group. The new series is constructed for country as a whole and Regional States including Dire Dawa and the Addis Ababa City Administration. However, similar indices had been utilized at Addis Ababa Level since 1963 and at Country, Urban and Rural Levels since 1995/96 and in Country and Regional level since 2000.

All the twelve general indices are divided into two major groups that is food and non-food index. The non-food index has eleven major divisions each, namely: Alcoholic Beverages; Cigarettes and Tobacco; Clothing and Footwear; House Rent, Construction Materials, Water, and Fuel and Power; Furniture, Furnishing, Household Equipment and Operation; Health; Transport; Communication; Recreation, Culture; Education; Restaurants and Hotels; and Miscellaneous Goods and Services. On the other hand, the Food Index has 9 classes. These are: Bread and Cereals; Meat; Milk, Cheese and Eggs; Oil and Fats Spices; Fruits; Vegetables and Pulses, Sugar, Honey and Chocolate; Food Products n.e.c., and Non-alcoholic beverages.

Furthermore, the new CPI based on December 2011 also includes more detailed “Housing, Construction materials, Water and Fuel and Power” components.

For the construction of the current consumer price indices, up to date data on retail prices are collected in the purposely selected sample market places located in representative urban centers in each zone/special weredas of the country. Hence, a total of 119 market places were selected for the retail price survey. In each market place an enumerator is assigned to undertaking the data collection activities. The price data is collected from the 1st day through 15th days of European Calendar month under consideration. To calculate the monthly regional consumer price indices, geometric means of prices of the specific regions are used. The distribution of the market place of each region and items included in the basket of commodities are given on Table A on page 2.

An important factor in constructing a Consumer Price Index is to select the representative basket of goods and services. Including all consumption items into the market basket of goods and services is both cumbersome and unnecessarily costly in term of data collection and processing. Furthermore, it doesn't make sense to include an insignificant weight into an index basket which could not move the price relative up or downwards compared to the general market trend. As a result, basket of goods and services included in the regional baskets are determined by expenditure cut-off point. The total numbers of items included in the regional basket in the December 2011 based indices are given in Table A on page 2.

Country level CPI aggregates the regional group indices and the contributions of the five relatively big regions in terms of the magnitude of the expenditure account for more than 94 percent. These regions are Oromiya, Amhara, SNNP, Addis Ababa and Tigray. On the other hand, the contributions of the remaining regions to the Country Level Consumer Price Index is about six percent.

According to the weights for food and non-food groups in Table B below, the December 2011 based CPI is about 53 percent of household expenditure spent on the food component, which declined by 4 percentage points as compared to the December 2006 based CPI. On the other hand, the expenditure on non-food components increased from 43 percent to 47 percent.

The 2011 CPI adapted the full version of the latest Classification of Individual Consumption by Purpose (COICOP) while the 2006 based CPI was an earlier version of COICOP. The following table shows the different COICOP versions by Comparison. In the 2006 based CPI Recreation, Entertainment and Education; and Transport and Communication were put in the same divisions while the 2011 based CPI separated them as standalone divisions. A new division called Restaurants and Hotels was introduced in the 2011 based CPI by moving the food taken away from home previously categorized with Food to this new division. Non-Alcoholic beverages were taken out of the Non-Food division and moved to the Food division.

February 2014 Country Level Inflation Rate

a) 12 months Moving Average Inflation at Country Level

As it is indicated in Table 'C' below the country level overall inflation rate (annual change based on 12 months Moving Average) rose by 7.5 percent in February 2014 as compared to the one observed in a similar period a year ago. The country level food inflation increased by 4.8 percent as compared to the one observed a year ago. The country level Non-food inflation rate increased by 10.6 percent in February 2014 as compared to the one observed in February 2013. The 12 months moving average inflation rate shows the longer term inflationary situation.

b) Inflation based on comparison of Current vs. Last year's similar month at Country Level

Inflation based on comparison of Current vs. Last year's similar month shows the current inflation situation. Table (D) shows Inflation rate based on last year's similar month comparison. As can be seen from the table the February 2014 General year-on-year inflation has increased by 7.9 percent as compared to the one observed in February 2013. The 7.9 percent rise in General inflation rate is due to the fact that the General Consumer Price Index (CPI) of 125.1 percent observed in February 2014 was higher than the corresponding 116.0 percent General Consumer Price Index (CPI) observed in February 2013. The year-on-year Food inflation has increased by 4.7 percent in February 2014 as compared to the one observed in February 2013. The reason for the increase in the food Inflation rate was that the 120.9 percent Food Consumer Price Index (CPI) observed in February 2014 was greater than the corresponding 115.5 percent Food Consumer Price Index (CPI) observed in February 2013. The total price index of **Bread and Cereals in February 2014 has increased by 3.6 percent** as compared to similar month last year which significantly contributed to the rise in the indices of Food and the General Consumer Price Index. However, prices of Maize, Wheat and Sorghum have declined in February 2014. Non-alcoholic Beverages and Coffee have declined by 5.1 percent. Moreover, the Non-Food inflation also increased i.e by 11.4 percent in February 2014 as compared to the one observed in February 2013. Rise in Inflation in the Non-food component is mainly due to rise in the prices of **Chat**, Clothing and Footwear, House rent, Firewood and Household goods and furnishings. There was no appreciable change in the Index of communication as compared to similar month last year.

c) Inflation based on comparison of Current vs. Last month at Country Level

The General CPI for February 2014 has showed a decline of 0.7 percent as compared to the preceding month of January 2014. The monthly inflation rate measures the price change between the two latest months. Although up to date, it can be affected by seasonal and other short term effects.
