Introduction

The Consumer Price Index (CPI) measures the average change in the price paid by consumers for a fixed market basket of goods and services. It is usually based on household expenditure weights of the goods and services in the basket and their current market prices. The twelve CPI's (i.e., the CPI's of the 11 Regions and the CPI at Country Level) presented in this report are based on the results of the Household Income, Consumption and Expenditure Survey (HICES) conducted by the Central Statistical Agency in 2004/2005 from which expenditure weights are derived for major household goods and services of that period and adjusted using the December 2006 retail prices of the goods and services as a base period.

The December 2006 based CPI updates the previous CPI series (i.e. December 2000 based) and the newly selected baskets are more diversified and the weights are more accurate. It also showed various improvements and incorporates non-food index as an independent group. The new series is constructed for country as a whole and Regional States including Dire Dawa and the Addis Ababa City Administration. However, similar indices had been utilized at Addis Ababa Level since 1963 and at Country, Urban and Rural Levels since 1995/96 and in Country and Regional level since 2000.

All the twelve general indices are divided into two major groups that is food and non-food index. The non-food index has ten major groups each, namely: Beverages; Cigarettes and Tobacco; Clothing and Footwear; House Rent, Construction Materials, Water, and Fuel and Power; Furniture, Furnishing, Household Equipment and Operation; Medical Care and Health; Transport and Communication; Recreation, Entertainment and Education; Personal Care and Effects; and Miscellaneous Goods and Services. On the other hand, the Food Index has 13 sub-groups. These are: Cereals; Pulses; Bread and Other Prepared Food; Meat; Milk, Cheese and Eggs; Vegetables and

Fruits; Oil and Fats Spices; Potatoes, Other Tubers and Stems; Coffee Beans (whole) and Tea Leaves; Other Food Items; Milling Charges; and Food taken Away from Home. Furthermore, the new CPI based on December 2006 includes more detailed #Housing, Construction materials, Water and Fuel and Power; components.

For the construction of the current consumer price indices, up to date data on retail prices are collected in the purposely selected sample market places located in representative urban centers in each zone/special weredas of the country. Hence, a total of 119 market places were selected for the retail price survey. In each market place an enumerator is assigned to undertaking the data collection activities. The price data is collected from the 1st day through 15th days of European Calendar month under consideration. To calculate the monthly regional consumer price indices, geometric means of prices of the specific regions are used. The distribution of the market place of each region and items included in the basket of commodities are given on Table A on page 2.

An important factor in constructing a Consumer Price Index is to select the representative basket of goods and services. Including all consumption items into the market basket of goods and services is both cumbersome and unnecessarily costly in term of data collection and processing. Furthermore, it doesn't make sense to include an insignificant weight into an index basket which could not move the price relative up or downwards compared to the general market trend. As a result, basket of goods and services included in the regional baskets are determined by expenditure cut-off point. The total numbers of items included in the regional basket in the December 2006 based indices are given in Table A on page 2.

Country level CPI aggregates the regional group indices and the contributions of the five relatively big regions in terms of the magnitude of the expenditure account for more than 95 percent. These regions are Oromiya, Amhara, SNNP, Addis Ababa and Tigray. On the other hand, the contributions of the remaining regions to the

Country Level Consumer Price Index is about five percent.

According to the weights for food and non-food groups in Table B below, the December 2006 based CPI is about 57 percent of household expenditure spent on the food component, which declined by 3 percentage points as compared to the December 2000 based CPI. On the other hand, the expenditure on non-food components increased from 40 percent to 43 percent. This indicates that the economic situation in the country is going in the right direction as postulated by economic theory. Similarly, in this period larger regions resulted in a substantial decrease in the average weights for food, despite the increased food taken out of home. It was offset mainly by an increase in housing, construction materials, water and fuel and power, furnishing and transport and communication.

November 2008 Inflation Rate

As it is indicated in Table 'C' below the country level overall inflation rate (annual change based on 12 months Moving Average) stood at 42.8 percent in November 2008. This rate is 25.7 percentage points higher than the corresponding annual average rate of 17.1 percent at November 2007. Similarly, the country level food inflation rate stood at 58.7 percent and the country level Non-food inflation rate stood at 20.4 percent in November 2008. The 58.7 percent Country level food inflation rate in November 2008 is 37.4 percentage points higher than that of 21.3 percent inflation rate at November 2007. This higher increase in the Food inflation rate was due to the increase in price of the Food components like Cereals, Pulses, Meat, Oils and fats (Specially Butter), Milk and egg, Vegetable and fruits, Potatoes & Other Tubers and Stems, Other food Items and food taken away from home.

From the month of August 2008 to November 2008 it was observed that the monthly percent change in General and Food inflation showed a decline as compared to the previous months. This was as a result of Cereals (especially Maize, Teff, and Wheat) price stabilization in the regions with the highest share in the CPI, namely, (Addis Ababa, Amhara, Oromia and Southern Nations and Nationalities) starting from August 2008 as compared to the previous months. The price of maize has been declining in most of the regions. As can be seen from Table 1(a), the November 2008 General Consumer Price Index has increased by 49.4 percent as compared to October 2007 while it was 55.4 percent in October 2008 showing a monthly decline of 6.0 percentage points. In other words, when we compare last month's index with the current month we observe a declining trend.

The monthly change in Non-Food inflation rate showed a slight decline in November 2008 due to the decrease in the prices of Fuel. House Rent, Construction Materials, Water and Fuel and Power contribute the highest share (almost 50%) to the Non-Food index. The second most important group in the Non-Food index component is Clothing and Footwear which contributes about 20% to this component. Due to the decrease in the price of Fuel the November 2008 index for Transport and Communication and Fuel and power has been decreased. In general, the monthly percent change in the rate of inflation increase showed a decline starting August 2008 but the 12 months moving average inflation showed an increase. It means that after August 2008 we observe a stable price trend as compared to the preceding period. On the other hand, the inflation rate is computed based on 12 months moving average and a fairly stable situation observed in the recent few months could not be revealed in the short term. In other words, the moving average Inflation carries the effect of the last 24 months.

However, as shown in Table D, if the very high price increase observed in Cereals were kept constant to the base period of December 2006, General and Food inflation rate could have been 22.0 percent and 23.1 percent, respectively in November 2008.
