Introduction

The Consumer Price Index (CPI) measures the average change in the price paid by consumers for a fixed market basket of goods and services. It is usually based on household expenditure weights of the goods and services in the basket and their current market prices. The twelve CPI's (i.e., the CPI's of the 11 Regions and the CPI at Country Level) presented in this report are based on the results of the Household Income, Consumption and Expenditure Survey (HICES) conducted by the Central Statistical Agency in 2004/2005 from which expenditure weights are derived for major household goods and services of that period and adjusted using the December 2006 retail prices of the goods and services as a base period.

The December 2006 based CPI updates the previous CPI series (i.e. December 2000 based) and the newly selected baskets are more diversified and the weights are more accurate. It also showed various improvements and incorporates non-food index as an independent group. The new series is constructed for country as a whole and Regional States including Dire Dawa and the Addis Ababa City Administration. However, similar indices had been utilized at Addis Ababa Level since 1963 and at Country, Urban and Rural Levels since 1995/96 and in Country and Regional level since 2000.

All the twelve general indices are divided into two major groups that is food and non-food index. The non-food index has ten major groups each, namely: Beverages; Cigarettes and Tobacco; Clothing and Footwear; House Rent, Construction Materials, Water, and Fuel and Power; Furniture, Furnishing, Household Equipment and Operation; Medical Care and Health; Transport and Communication; Recreation, Entertainment and Education; Personal Care and Effects; and Miscellaneous Goods and Services. On the other hand, the Food Index has 13 sub-groups. These are: Cereals; Pulses; Bread and Other Prepared Food; Meat; Milk, Cheese and Eggs; Vegetables and

Fruits; Oil and Fats Spices; Potatoes, Other Tubers and Stems; Coffee Beans (whole) and Tea Leaves; Other Food Items; Milling Charges; and Food taken Away from Home. Furthermore, the new CPI based on December 2006 includes more detailed #Housing, Construction materials, Water and Fuel and Power; components.

For the construction of the current consumer price indices, up to date data on retail prices are collected in the purposely selected sample market places located in representative urban centers in each zone/special weredas of the country. Hence, a total of 119 market places were selected for the retail price survey. In each market place an enumerator is assigned to undertaking the data collection activities. The price data is collected from the 1st day through 15th days of European Calendar month under consideration. To calculate the monthly regional consumer price indices, geometric means of prices of the specific regions are used. The distribution of the market place of each region and items included in the basket of commodities are given on Table A on page 2.

An important factor in constructing a Consumer Price Index is to select the representative basket of goods and services. Including all consumption items into the market basket of goods and services is both cumbersome and unnecessarily costly in term of data collection and processing. Furthermore, it doesn't make sense to include an insignificant weight into an index basket which could not move the price relative up or downwards compared to the general market trend. As a result, basket of goods and services included in the regional baskets are determined by expenditure cut-off point. The total numbers of items included in the regional basket in the December 2006 based indices are given in Table A on page 2.

Country level CPI aggregates the regional group indices and the contributions of the five relatively big regions in terms of the magnitude of the expenditure account for more than 95 percent. These regions are Oromiya, Amhara, SNNP, Addis Ababa and Tigray. On the other hand, the contributions of the remaining regions to the

Country Level Consumer Price Index is about five percent.

According to the weights for food and non-food groups in Table B below, the December 2006 based CPI is about 57 percent of household expenditure spent on the food component, which declined by 3 percentage points as compared to the December 2000 based CPI. On the other hand, the expenditure on non-food components increased from 40 percent to 43 percent. This indicates that the economic situation in the country is going in the right direction as postulated by economic theory. Similarly, in this period larger regions resulted in a substantial decrease in the average weights for food, despite the increased food taken out of home. It was offset mainly by an increase in housing, construction materials, water and fuel and power, furnishing and transport and communication.

March 2009 Inflation Rate

As it is indicated in Table 'C' below the country level overall inflation rate (annual change based on 12 months Moving Average) stood at 45.2 percent in March 2009. This rate is 26.2 percentage points higher than the corresponding annual average rate of 19.0 percent at March 2008. Similarly, the country level food inflation rate stood at 59.2 percent and the country level Non-food inflation rate stood at 24.4 percent in March 2009. The 59.2 percent Country level food inflation rate in March 2009 is 34.0 percentage points higher than that of 25.2 percent inflation rate at March 2008. This higher increase in the Food inflation rate was due to the increase in price indices of the Food components like Cereals, Pulses, Meat, Milk and egg, Vegetable and fruits, Potatoes & Other Tubers and Stems, Other food Items and food taken away from home.

The 12 months moving average General and Food inflation showed a decline in March 2009. In this regard the General moving average inflation rate was 46.1 in February 2009 and consequently declined to 45.2 percent in March 2009. In a similar way the Food moving average inflation rate was declined from 61.1 percent in February 2009 to 59.2 percent in March 2009. However, slight increases in prices of the Food and Non-food components of the Index has been observed starting February 2009. Especially, the prices of Wheat, Rice, Fruits and Vegetables and Sugar are on the rise. Among the non-food components, the prices of construction materials, clothing and footwear, Furniture and furnishing and personal care and effects are increasing. However, as the figures indicate the increase in prices in recent months is much lower than the situation observed last year.

Table (D) shows Inflation rate based on last year's similar month comparison. As can be seen from the table the March 2009 General year-on-year inflation was 23.7 percent and it is less than the one observed in February 2009 which was 32.8 Percent showing a decline by 9.1 percentage points. Similarly, the year-on-year Food inflation declined from 38.9 percent in February 2009 to 26.5 percent in March 2009 which declined by 9.1 percentage points. Similarly the Non-Food inflation declined by 4.3 percentage points in March 2009 as compared to the one observed in February 2009.
