CHAPTER I

1 INTRODUCTION AND OBJECTIVES OF THE SURVEY

1.1 INTRODUCTION

Agriculture is a dominant sector of Ethiopian economy which makes a lion share contribution to the Gross Domestic Product, employment and foreign exchange earnings. Agriculture is still believed to remain a sector that plays an important role in stimulating the overall economic development of the country in the years to come. This would be realized if and only if strenuous efforts are made by the government and other concerned stakeholders including farmers to increase agricultural production and productivity. Several factors can influence agricultural production and productivity improvement. Among other factors, the increased use of modern farm inputs, modernization of farming activities by using improved farm implements as well as introduction of modern farming technologies to the sector are the major ones. In order identify, plan, implement and monitor agricultural projects and programs, availability of reliable, comprehensive and timely statistical data on the overall performance of the sector is essential.

Central Statistical Agency (CSA) of Ethiopia has been conducting integrated annual agricultural sample surveys and has been providing the survey results to the ultimate data users for more than three decades. Out of the annual agricultural sample surveys carried out by the CSA, Belg season agricultural sample survey is the one that generates data on crop cultivated area, production and farm management practice for the major Belg season crops for the private peasant holdings annually. In the previous years, two reports were used to be generated from the Belg agricultural sample survey nearly simultaneously which are named as a report on area and production and report on farm management practices. Since the year 2013/14 (2006 E.C.), the Belg season agricultural sample survey findings are compiled and produced in only one report with the basic idea of making the report user friendly and handy. The report contained the data on crop cultivated area and production as well as farm management practices of the private peasant holdings of the major Belg crops. The findings of the 2020/21 (2013 E.C.) Belg survey are summarized and presented using tables and graphs at national and regional levels.

1.2 OBJECTIVES OF THE SURVEY

There are two main objectives of the 2020/21 (2013 E.C) Belg season agricultural sample survey. These are to generate basic quantitative information on:

- Crop cultivated area, production and yield of major Belg season crops and
- The use of different farm management practices that includes fertilizer applied area by crop type, the type and quantity of fertilizers used, areas applied with improved seeds and indigenous seeds, areas applied with pesticide, areas under irrigation, and areas under extension package by crop type and category.

Given the objectives, the survey findings are presented in such a way that, first crop cultivated area and production is discussed and then followed by farm management practice findings, subsequently.

1.3 Number of EA's and Households Covered in Belg, 2013 EC (2020/21) Survey

A slight variation on the number of planned and covered EA's of Belg, 2013 EC (2020/21) Survey was observed. This is mainly due to Belg season agricultural activity is highly dependent on the weather and the rain fall conditions of the area where Belg crop growing EA's are located.

Table 0. Number of EA's and Households Covered in Belg, 2013 EC (2020/21) Survey

No.	REG	Number of EA'S Planned	Number of EA Covered	Number of Households Covered
1	Afar	22	14	255
2	Amhara	192	168	5,660
3	Oromia	502	453	16,660
4	Somale	20	2	89

10	Diredewa	8	8	177
Total covered		1,394	1,266	53,839

CHAPTER II

2. SURVEY METHODOLOGY, DATA COLLECTION AND PROCESSING

2.1 COVERAGE

The 2020/21 (2013 E.C) Annual Agricultural Sample Survey of the Belg season covered the entire rural parts of the country. The survey was planned to cover a total of nearly **1,394** Enumeration Areas (EAs). However, in 128 EAs among the selected EAs, the survey was not successful due to various reasons (mainly due to wheather related conditions). Therefore, the survey was successfully accomplished involving only **1,266** EAs (for detailed information of covered EA's see Table 0 above).

2.2 SAMPLING FRAME

The list of Enumeration Areas (EAs) was obtained from the planned but was not excuted 2018 Population and Housing Census Map (Carthographic) work. From the list of the EAs, a set of sampled EAs were selected based on the sample design proposed for the survey. Once the selection of the sampled EAs was accomplished,a fresh list of households within each selected EA was carried out. The list of agricultural households in each EA was used as a sampling frame from which the agricultural households are finally selected as sources of data.

2.3 SAMPLE DESIGN AND SELECTION SCHEME

In order to select the survey sample, a stratified two-stage cluster sample design was implemented. Enumeration areas are the primary sampling units (PSUs) whereas the agricultural households are the Secondary Sampling Units (SSUs). The sample size for the 2020/21 agricultural sample survey was determined by considering both the required level of precision for the most important estimates within each domain and the amount of resources allocated to the survey.

In order to reduce the non-sampling errors, considerable effort was allocated to manage the survey in terms of quality and operational control. With the exception of Harari, and Dire

Dawa, each region was taken to be the domain of estimation. Each zone of the regions / special woredas was adopted as a stratum for which major findings of the survey are reported.

Enumeration areas from each stratum were selected systematically using a probability proportional to size sampling technique (PPS); size being the number of agricultural households. From the fresh list of households prepared at the beginning of the survey, 20 agricultural households within each sampled EA are selected systematically. The estimation procedures of totals, ratios, sampling error and the measurements of precision of estimates (CV) of the survey are given in Appendix-I, II and III.

2.4 FIELD ORGANIZATION

The Central Statistical Agency (CSA) has 25 statistical branch offices located in different parts of the country. Each branch office has its respective branch head, statisticians, field supervisors, enumerators, other supporting staffs and drivers. By the year 2020/21 (2013 E.C), 21 Branch offices are involved in the field operation activities of agricultural sample survey of the Belg season. In order to accomplish the data collection activities, field enumerators are equipped with the necessary survey equipmentssuch as GPS, compass, Tablet, measuring tape, questionnaire, etc. To facilitate the field work of data collection and for field supervision, the branch offices used the available four-wheel drive vehicles. The Addis Ababa, Jijiga and Shire statistical branch offices did not take part on the 2020/21 (2013 E.C) Belg season agricultural sample survey as Belg season farming activities by small holder private holdings are not practiced in the EAs of the branch offices. The 2020/21 (2013 E.C) Belg season agricultural sample survey was not also carried out in the teritory of Mekele CSA branch office due to the war and conflict firedout in the area.

2.5 TRAINING OF THE FIELD STAFF

At the beginning of the survey year, the field staff-training program was carried out for the survey in two-stages. The first stage training was the training of the trainers which was carried out at Central Statistics Agency Head Quarterin Addis Abeba for eight consecutive days. In the first stage training, the trainers and the trainees were the staff from the head office who in turn trained the CSA branch office fieldworkers as of statisticians, field

supervisors and enumerators. That is, the head office professionals/experts who were trained in the first stage in turn provided similar trainings for statisticians, field supervisors and enumerators for 13 days in the selected Statistical Branch Offices as the center for the second round training. During the second-stage training, the trainee were given detailed classroom training on the objectives and uses of the Agricultural Sample Survey (AgSS), concepts and definitions of terms used, the method of area measurement, interviewing procedures, etc. The second stage training also included a field practice to reinforce the procedures discussed in the classroom, to identify the boundaries of the households included in the EAs and to practice interviewing, area measurement using GPS and compass rope techniques, etc.

2.6 METHODS OF DATA COLLECTION

The agricultural data for 2020/21 (2013 E.C) Belg season crops were collected from the selected rural agricultural households by interviewing the respondents (subjectively) supported by questionnaire and by measuring physically (objectively) the farm fields (areas) for the selected agricultural households using the modern technologies/equipment and software namely Tablet and Measure Software.

A major characteristic of Ethiopian agriculture is the existence of two well-known crop production seasons named as Meher (main) and Belg (short rain) seasons. Meher is a long rainy season which normally occurs from June to September. The Belg season most often refers to small rainy season which normally occurs from February to May mostly in limited areas of the country. Generally, the Meher season rain provides ideal crop growing moisture for the longer maturing crops.

A point of contention arises with respect to the pure definition of Belg crops. Belg cropping practices are heterogeneous across different parts of the country. The nature of the sowing period also overlaps with some of the Meher season crops. Consequently, the report on Belg Season crops in the past faced a problem of a clearly defined growing period. To help clarify the two-crop season, the following definitions have been used since 1987/88. Belg Season Crops are defined as crops that are harvested during the months of March to August, while crops that are harvested during September to February are considered as Meher season crops.

The time period for data collection on area, production and agricultural practices of the Belg season was from ‘Megabit 1 to Ginbot’ 30/2011 E.C. (March 8 to June 7, 2019GC). Crop cultivated area data are collected objectively using measurer software that was uploaded on the Tablets, while production data were collected subjectively by interviewing the agricultural holders by questionnaire based personal interview. The percentage change of crop yield expected this year relative to the previous year’s yield (condition factor) is collected from both agricultural holders and Development Agents (DAs) within each EA to estimate this year’s crop yield subjectively. Data on production of Belg season crops are then, computed by the use of the crop cultivated area estimates and the yield data collected from the sampled holders and DAs.

2.7 DATA PROCESSING

Census and Survey Processing System (CSPro) software was used by data processing experts to design the tablet-based field data collection applications based on the questionnaires prepared for each survey module by subject matter specialits. Validity checks such as ranges, skips and consistencies were included in the application to maintain the quality and field level consistency checking of the data. Computer Assisted Personal Interviewing (CAPI) using tablets technology was used to conduct face-to-face interview, cropland area measurement and others data collection . The collected data was then transferred to the supervisors’ tablets using Bluetooth. After checking the quality of data collected by enumerator, supervisors transferred the collected data to the server located at the head office using VPN network connection.

At the head office, further validity checks were done on each question and consistencies between questions. If error is observed during the validity checks, the data were sent back to the field with error repots for correction. After the corrected data was sent back to the head office, further processing was done on the completed survey data. The final stage of the data processing was to summarize the data and produce statistical tables. Estimation of the statistical tables was done using CSPro and the tabulation component of IMPS (Integrated Microcomputer Processing System) software.

a. Data Entry, Editing, Coding and Verification

To insure the quality of the collected data,data editing, coding and verification tasks are very important. For this effect, these activities were carriedout during the fieldwork through tablet enabled logical relationship and programmed edit specification programme prepared and installed on the Tablet. Therefore, the data editing, coding, entry and verification tasks are accomplished at field during data capturing/collection activities. Further more, data consistency checking activities were handled at head quarter during data analysis.

b. Data Cleaning and Tabulation

Computer edit specifications and logical relationships among different questions/variables are prepared for use on Tablet and CSPro software was used for the purpose of data consistency checking. The filled in questionnaire data were entered into personal computers by data encoders of CSA through the use of CSPro. The data entry task was carriedout/accomplished at field level during data collection using (that have fully operational data entry system). After the data capturing/entry was accomplished, the data were checked for consistency and cleaned using the data cleaning specifications prepared for this purpose. Finally, tabulation was done on personal computers to produce results as indicated in the tabulation plan.

2.8 BASIC CONCEPTS AND DEFINITIONS

For a better understanding of the data presented in this report, the basic concepts and definitions of some technical terms and terminologies used in the collection of the agricultural sample survey data for 2020/21 (2013 E.C) Belg season are indicatedas follows.

Enumeration Area (EA): An Enumeration Area in the rural parts of the country is a locality that is in most cases less than and in some cases equal to a farmers' association in geographical area and usually it consists of 100 to 150 households.

Household: A household may be either:

- a) A one person household, that is a person who makes provision for his own food or other essentials for living without combining with any other person to form part of a multi-person household or
- b) A multi-person household, that is, a group of two or more persons who live together and make common provisions for food or other essentials for living. The persons in the group may pool their incomes and have a common budget. They may be related or unrelated persons, or a combination of both. These persons are taken as members of the household.

Agricultural Household: A household is considered as an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in partnership with others.

Holding: A holding is all the land and /or livestock kept, which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone, or with others, regardless of the title, legal form, size or location.

Holder: A holder is a person who exercises management and control over the operations of the agricultural holding and that makes the major decision regarding the utilization of the available resources. The holder has primary technical and economic responsibility for the holding. The holder may operate the holding directly as an owner or as a manager. Under conditions of traditional agricultural holding, a person may be regarded as a holder when the

person operates land or raises livestock in his own right, with or without getting helps from others. In other words, a holder is a person who decides on what, when, where and how to grow crops or raise livestock and the one who has the right to determine the utilization of the products.

Parcel: A parcel of a holding is any piece of land entirely surrounded by land, water, road, forest, etc., which are not part of the holding. A parcel may consist of one or more cadastral units, plots or field adjacent to each other.

Field: A field is defined as any plot of land which is a parcel or part of a parcel under the same or mixed crops or any other form of private holding.

Belg Season Crops: are defined as any temporary crops that are harvested during the months of March (Megabit) to August (Nehase).

Meher Season Crops: are those crops that are harvested during September (Meskerem) to February (Yekatit).

Irrigated area: refers to the area of land that is purposefully and actually provided with water artificially, other than by rain for improving the production of crops. The uncontrolled flooding of land by the over flow of rivers or streams is not categorized as irrigation practice although sometimes farmers use this incidence for crop production.

Improved Seed: is defined as crop variety which gives significantly higher yield, better quality and/or better benefit compared to traditional varieties of seeds and usually produced by the Ethiopian Seed Enterprise (ESE) in Ethiopia.

Fertilizer: refers to anything applied to the soil that is intended to increase the amount of plant nutrients available for crop growth. Fertilizers are usually categorized into two which include natural and chemical fertilizers. Examples of natural fertilizers are farmyard manure and wood ashes while that of the chemical fertilizers are DAP (Di-Ammonium Phosphate) and UREA (Ammonium Nitrate).

Pesticides: Pesticides are chemicals useful for the mitigation, control or elimination of pests which are harmful to crop. Insecticides, herbicides and fungicides are all considered as pesticides.

CHAPTER III

3 SUMMARY OF MAJOR FINDINGS OF THE SURVEY

3.1 AREA AND PRODUCTION

The general overview of the 2020/21 (2013 E.C) Belg season agricultural sample survey estimate indicates a total cropland area estimates of about 2,124,387.28 hectare and production of 52,661,970.96 quintal, which includes grain crops, vegetables and root crops in the estimation. It is important to note that a crop named Mung bean/"Masho" was used to be reported as a cereal crop in the previous reports. In this report it is categorized as a pulse crop which is its proper category. With this background, the main findings of the 2020/21 (2013 E.C) Belg season crop production sample survey are presented in this Chapter.

3.1.1 Grain Crops: refer to a major crop category that includes cereals, pulses and oil seeds, which are not only the major food crops of country and but also are the main sources of household income and sources of the foreign currency earnings. 2020/21 (2013 E.C) Belg season agricultural sample survey result indicates that a total land area of about 1,748,457.62 hectare was cultivated by the major Belg crops (grains) from which a total grain production of about 14,754,984.98 quintals was estimated at national level. As compared to the production (the most past recent Belg season production) year of the 2018/19 (2011 E.C.) grain cultivated area has decreased by 8.27% and the total production has also decreased by 30.46%. Out of the total Belg season grain cropland area and production, cereals accounted for the largest percentage interms of both crop cultivated area and production.

Cereals accounted for about 1,335,905.95 hectares (76.40%) of the national Belg grain cropland area) and about 12,129,875.99 quintals (82.21% of the total Belg grain production). Following cereals is pulse crops which accounted for about 401,362.65 hectares (22.96% of the total grain area) and about 2,581,034.58 quintals production (which is 17.49% of the total grain production). Moreover, oilseeds are the other category of grain crops produced which accounted for an area of 11,189.03 hectares (0.64% of the total grain area) and 44,074.41 quintals of production (0.30% of total grain produced during the Belg season). (Formore details, see Summary Table 1).

Summary Table 1: Cropland Area and Production of Major Belg Crops: Private Peasant Holdings, 2018/19 (2011 E.C.), Country Level

Crop Category	Total Cropland Area		Total Production	
	in Hectare	%	In Quintals	%
Cereal.....	1,335,905.95	76.40	12,129,875.99	82.21
Pulses.....	401,362.65	22.96	2,581,034.58	17.49
Oilseeds.....	11,189.03	0.64	44,074.41	0.30
Grain crops.....	1,748,457.62	100.00	14,754,984.98	100.00

Inorder to illustrate the overall performance of the 2020/21 (2013 E.C) crop production year, the total estimated cropland area and production of grain crops for private peasant holders for seasons of Belg, Meher as well as forcommercial farms are presented in the Summary Table 2. By the year 2020/21 (2013 E.C) the overall grain cultivated area estimate is about 15,399,011.00 hectare (Meher, Belg and Commercial farms).

Summary Table 2: Summary of National Grain Cropland Area and Production of Meher season, Belg Season and Commercial Farms during 2020/21 (2013 E.C) Country Level

	Grain crops Area (Ha)	%	Grain Production(Qt)	%
Meher season private holdings	12,979,459.91	84.29	341,828,693.39	92.21
Belg season private holdings	1,748,457.62	11.35	14,754,984.98	3.98
Commercial Farms	671,093.47	4.36	14,125,163.50	3.81
Grand total	15,399,011.00	100.00	370,708,841.87	100.00

Out of the total grain area estimated, Belg season grain area accounted for about 1,748,457.62 hectares (11.35% of total grain area) where as Meher season grain area accounted for about 12,979,459.91 hectare (84.29% of the total grain area cultivated). Commercial farms grain cultivated area is about 671,093.47 hectares (4.36% of the total grain area cultivated).

The total grain crops produced during 2020/21 (2013 E.C) amounts 370,708,841.87 quintals which is increased by 6.37% from the 2018/19 (2011 E.C) total production considering Meher, Belg and commercial farms. Meher season, Belg season and commercial farms

account for about 341,828,693.39 Quintals (92.21%), 14,754,984.98 Quintals (3.98%) and 14,125,163.50 Quintals (3.81%) of the total grain production, respectively for the year 2020/21 (2013 E.C).

3.2 ESTIMATES OF THE 2020/21 (2013 E.C) TOTAL CROP LAND AREA AND PRODUCTION OF MAJOR CROPS, MEHER AND BELG SEASONS

For the year 2020/21 (2013 E.C), the total cropland area cultivated of major crops (grains) of the private peasant holdings during both seasons was estimated to be 14,727,917.54 hectares (commercial not included). Meher season accounts for 12,979,459.91 (88.13%) while Belg season accounts for 1,748,457.63 (11.87%) of grain crops area cultivated during both seasons. The estimated area of grain crops cultivated during both seasons is given in Summary Table 3.

Summary Table 3. Cropland Area under Major Crops for Private Peasant Holdings 2020/21 (2013 E.C), Both Seasons:Country Level

<i>Crop Type</i>	<i>Total Grain Cropland Area in Hectares during</i>						
	<i>Meher Season</i>		<i>Belg Season</i>		<i>Both seasons</i>		<i>Total</i>
	<i>Area in Ha</i>	<i>%</i>	<i>Area in Ha</i>	<i>%</i>	<i>Area in Ha</i>	<i>%</i>	
<i>Cereal</i>	10,538,341.91	81.19	1,335,905.95	76.40	11,874,247.86	80.62	
<i>Pulses</i>	1,674,950.34	12.90	401,362.65	22.96	2,076,312.99	14.10	
<i>Oilseeds</i>	766,167.66	5.90	11,189.03	0.64	777,356.69	5.28	
Total	12,979,459.91	100.00	1,748,457.63	100.00	14,727,917.54	100.00	

As indicated in Summary Table 3, cereals accounted for about 11,874,247.86 hectares (80.62% of the total grain cultivated area) while Pulses and Oil crops accounted for about 2,076,312.99 hectare (14.10%) and 777,356.69 hectares (5.28%) of the total grain cropland area, respectively, in both seasons. Graphical representation of the estimates of total area under major crops for private holdings in Ethiopia for both seasons during 2020/21 (2013 E.C), is indicated using Figure 1 as follows.

Figure 1: Estimate of Total Area under Major Crops for Private Peasant Holdings in Ethiopia for Both Seasons 2020/21 (2013 EC), National Level

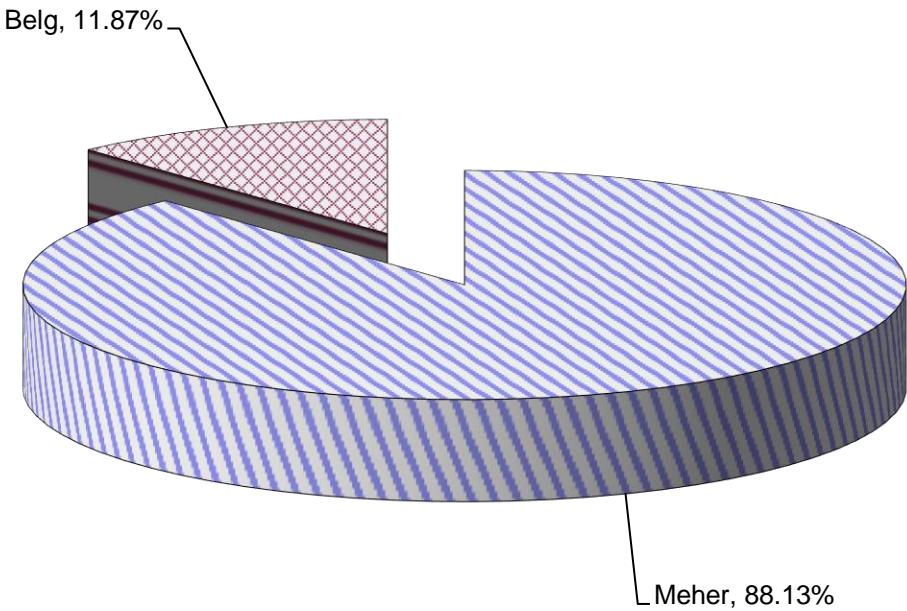

Figure 1 shows that out of the total major crops cultivated area by private peasant holdings during both seasons of 2020/21 (2013 E.C), Belg and Meher seasons account for 11.87% and 88.13%, respectively. Likewise, the overall performance of the major grain crops production estimates for both seasons is illustrated in Summary Table 4.

Summary Table 4. Total Production of Major Crops Harvested by Private Peasant Holdings, 2018/19 (2011 E.C.), Both Seasons: Country Level

Crop Type	Total Production in Quintals, Harvested during					
	Meher Season		Belg Season		Both seasons	
	Production in	Quintals	Production in	Quintals	Production in	Quintals
Cereal	302,054,260.58	88.36	12,129,875.99	82.21	314,184,136.57	88.11
Pulses	31,999,988.65	9.36	2,581,034.58	17.49	34,581,023.23	9.70
Oil crops	7,774,444.17	2.27	44,074.41	0.30	7,818,518.58	2.19
Total	341,828,693.40	100.00	14,754,984.98	100.00	356,583,678.38	100.00

The Summary Table 4 indicate that cereals production accounted for about **314,184,136.57** quintals (88.11% of the total grain crops) produced in both seasons. Pulses and Oil crops account for about **34,581,023.23** quintals (9.70%) and **7,818,518.58** (2.19%), respectively of the total sum of both seasons.

Moreover, the graphical representation of the estimates of the total production of major crops for private holdings in Ethiopia for both seasons during 2020/21 (2013 E.C), is indicated using Figure 2 bellow.

Figure 2: Estimates of Total Production of Major Crops for Private Holdings in Ethiopia for Both Seasons of 2020/21 (2013 EC),

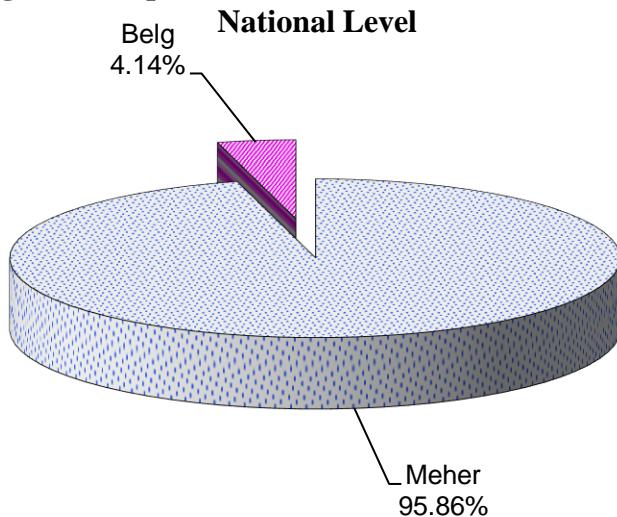

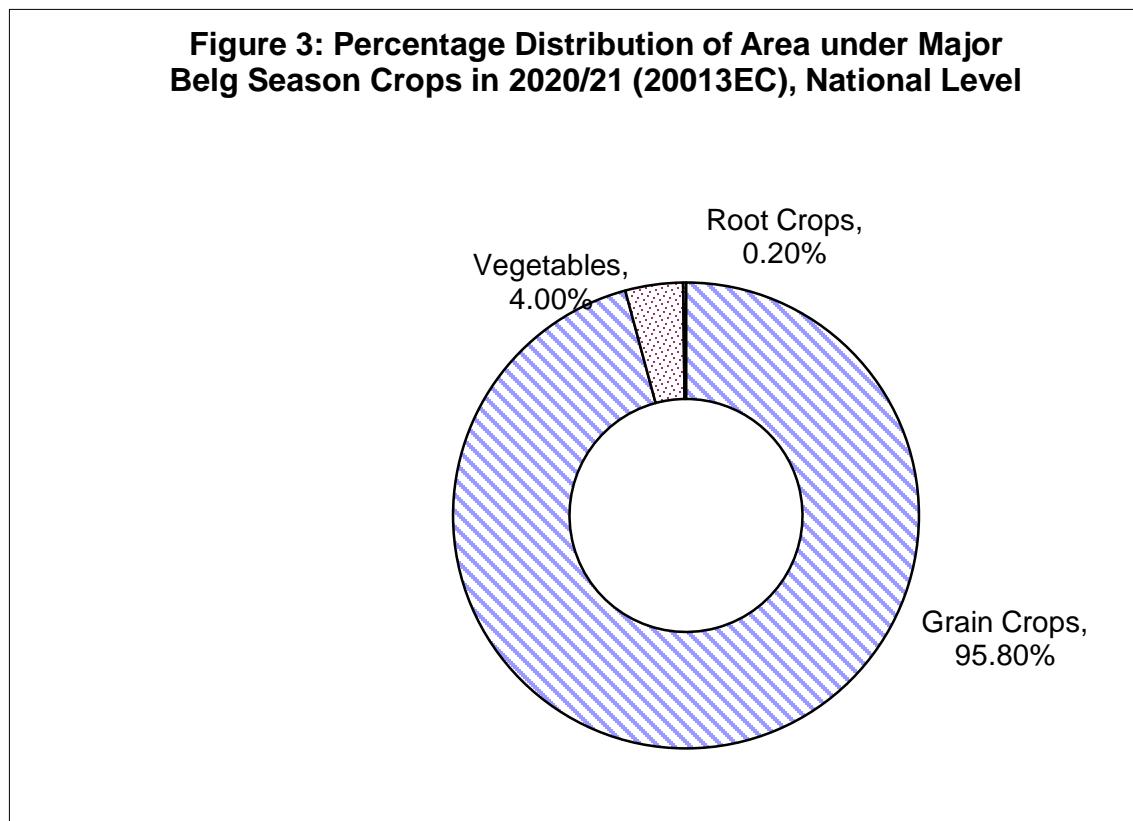

Figure 2 indicates that out of the total of major grain crops produced by private peasant holdings during both seasons of 2020/21 (2013 E.C), Belg accounts for 4.14% (which is about 14,754,984.98 quintals) whereas Meher accounts for 95.86% (about **341,828,693.40** quintals).

3.1.3 Vegetables: holders living near to urban centres largely practice vegetable farming. Vegetable farms are not commonly practiced by the rural private peasant holders which is evidenced by the small volume of production recorded as indicated by the survey result. This is better indicated in Figure 3. Vegetables account about 3.44% of the area under all crops at national level during the Belg season. Out of the total area under vegetables, 85.97% and

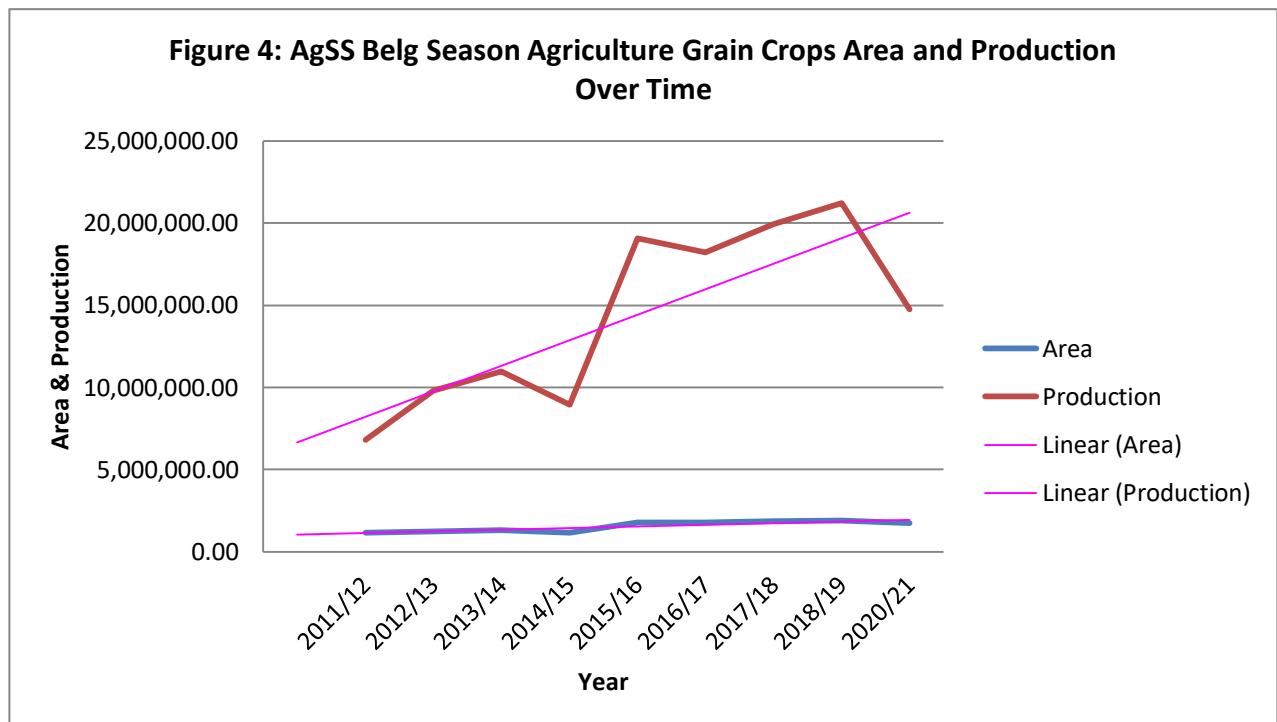

5.82% are accounted for Ethiopian Cabbage and Head Cabbage respectively (See Statistical Table 5.1).

3.1.4. Root Crops: - Root crops such as onion and garlic are indispensable to improve the taste and scent of the food we eat. Other crops like potatoes, sweet potatoes and taro/ Godere are among the major root crops that are consumed in the country. The economic importances of these crops prompt the peasant farm holders to grow many of the root crops as shown in the survey results. For more details, see the statistical Table 5.1. Root crops covered nearly 14.26% of the area under all Belg crops in the country. Potatoes, garlic and onion accounted for 82.30%, 5.29% and 4.04% of the total root crop area cultivated respectively. In terms of production, potatoes, sweet potatoes and onion accounted for 91.26%, 3.68% and 2.55% of the total root crop production respectively.

3.1.5 Trends of Grian Crops Area and Production

Figure 4 below displays trends of Belg season grain crops area and production for the period 2011/12 to 2020/21 (2004-2013EC) for the purpose of comparision and understanding the changes over time. Thus, the trend exhibits, annualy on average, increasing trend in area (by about 6.43%) and production (by about 16.44%) of Belg season agriculture over the past eight years.

NOTES:

1. Some estimates in all reporting levels are excluded due to high coefficient of variations. Nevertheless, they are incorporated in the total estimates. Hence the sum of the specific estimates may not be equal to the total estimates.
2. Users are also advised to use those estimates with 30-50% coefficient of variation (CV) cautiously.
3. Even though area is reported for some crops in some reporting levels, there might be no production data available for some crops. Such cases are designated by Not Stated (NS). In all tables, if the data are not available, it is labeled as “-”.

**Statistical Tables Presenting Area and
Production Results at
National and Regional Levels**

Summary Table 5: Estimates of total Grain Cropland area and production for Meher (main), Belag (minor) Large Scale Farms (LSF) for 2020/21 (2013EC)

CHAPTER IV

4 FARM MANAGEMENT PRACTISES OF THE 2020/21 (2013 E.C) BELG SEASON

4.1 INTRODUCTION

The observed experiences indicate that farmers' attitude and tendency towards adoption and acceptance of new innovations, modern agricultural techniques and technologies such as the use of fertilizers, irrigation and improved seeds have positive impact on the development of agricultural sector as a whole. In this regard, the extent of adoption of modern agricultural practices such as utilization of fertilizer, irrigation, pesticides and improved seeds by the private peasant farm holders is often used as important indicators for estimating the rate and extent of modern technologies used in the country's agriculture. The magnitude and level of modern/improved farm management practices in the agricultural sector are used to be the sole indicators of the transformation rate of the country's traditional agriculture to modern agriculture.

The overview of the 2020/21 (2013 E.C) Belg season farm management practice of the country indicates that the total quantity of chemical fertilizers applied during the season has slightly increased 52.02% (from 1,124, 955 quintals in 2011 E.C to 2,345,903 quintals in the 2013 E.C), at national level. Similarly, the total improved seed applied area has also increased by about 52.17% (from 136,193 hectares in 2011 E.C to about **285,963.00** hectares in 2011 E.C). Interms of quantity as well, the total improved seeds applied has increased by 63.62% which is a change from 71,542 quintals in 2011 E.C to **196,666.00** quintals in 2013 E.C).

Given this background, in Chapter four, the quantitative information about the use of modern agricultural inputs for Belg season crops of 2020/21 (2013 E.C.) of the private peasant holdings are presented both at country and regional levels. Furthermore, the general composition of the farm holders Surveyed applying inputs interms of age group, holders applying inputs by educational status and the number of holders and the damaged crop land area in hectare are summarized and and presented in this Chapter. The data are generated from the findings of Belg season agricultural sample survey conducted by the Central Statistical Agency of Ethiopia in May 2019.

4.2 SUMMARY OF THE FARM MANAGEMENT PRACTICES OF THE 2020/21 (2013 E.C.) BELG SEASON AGRICULTURAL SAMPLE SURVEY

According to the 2020/21 (2013 E.C.) Belg Season Crop Production Sample Survey, total cropland area estimated is about 2,124,387 hectares of land while the estimated number of holders engaged in crop production activity is about 12,168,676 at national level. For more illustration see summary Table 6 bellow.

Table 6.Total Cropland Area and Number of Holders Engaged in 2020/21 (2013 E.C.) Belg Season Crop Production

Background Characteristics	Statistical Figures
Total Belg Cropland Area in Hectare	2,124,387
Number of Belg Crop Producing Holders	12,168,676
Improved Farm Management practiced Area (in Hectare)	2,290,889
Quantity of Commercial Fertilizer Applied (Quintals)	2,345,435

As indicated Table 6, during 2020/21(2013 E.C.), out of the total area under Belg season crops, 2,290,889 hectares (107.84 % of the total cropland area), (which is the sum of individual area that was covered by each type of improved farm management practice as of chemical fertilizer, improved seeds, pesticides, etc.), was under the use of improved farm management practices that includes fertilizer, improved seed, pesticides, irrigation and extension services. Moreover, it was estimated that about 2,345,435 quintals of chemical fertilizer was utilized for crop production nationally. The total cropland areas categorized into different types of farm management practices for the season are summarized in Table 7.

Table 7.Belg Season Cropland Area under Different Farm Management Practices for Production Year of 2020/21 (2013 E.C), National Level

Farm Management Practice Category	Cropland Area Under Different Farm Management Practices (Hectare)	Percentage from Total Cropland Area
Fertilizer	803,762.00	37.84
Improved Seeds	285,963.00	13.46
Pesticides	232,881.00	10.96
Irrigation	125,948.00	5.93
Extension	842,335.00	39.65
Total Belg Cropland Area	2,124,387.00	100.00

As shown in Table 7 above, the total crop land area estimated is 803,762 hectare for fertilizer, 285,963 hectare for improved seed, 232,881 hectare for pesticide, 125,948 hectare for irrigation and 842,335 hectare for extension. Out of the total Belg cropland area, the percentage distribution is 37.84% for fertilizer, 13.46% for improved seed, 10.96 % for pesticides 5.93 % for irrigation and 39.65 % for extension serveces. Furthermore, the survey findings indicate that cereals account for the largest share of the different farm management practices observed as summarized in Table 8.

Table 8. Summary of Cropland Area under Improved Farm Management Practices for Private Peasant Holdings, 2020/21 (2013 E.C.) Belg season, National

Crop Category	Cropland Area			
	Total Area		Area under Improved Farm Management Practice	
	Hectare	%	Hectare	%
All crops	2,124,387.00			
Cereals	1,335,906.00	62.88	1,497,183.00	58.31
Pulses	401,363.00	18.89	310,392.00	18.89
Oil crops	11,189.00	0.53	7,021.00	0.53
Vegetables	72,993.00	3.44	31,455.00	3.44
Root Crops	302,937.00	14.26	444,839.00	14.26
Total	2,124,388.00	100.00		58.31

As indicated in summary Table 8 above, estimates of total cropland area under different farm management practices shows that cereals accounted 1,497,183.00 hectares (**62.88 %** of the total all cropland areal), followed by pulses with 310,392.00 hectares (18.89% from the total all cropland area). Root corps, vegetables and oil crops accounted for 444,839.00 hectare (14.26 %), 31,455.00 hectares (3.44 %) and 7,021 hectare (0.53%), respectively. Out of the total cereal cultivated cropland area, 1,497,183.00 hectare (58.31 % of the total cropland area) is cultivated with improved farm management practices (includes all fertilizer, improved seed, pesticides and irrigation).The respective numbers are 310,392 hectare (18.89 %) for pulses , 444,839hectare (14.26%) for root crops, 7,021 hectare (0.53%) for oil crops. The corresponding figure for vegetables can be referred as 31,455 hectare (3.44%).

4.3 FERTLIZER APPLIED AREA AND FERTLIZER TYPE USED

The results of the survey indicate that Belg season cropland area under both natural and chemical fertilizers were estimated to be 1,195,442 hectares, covering 56.27% of the total area under Belg seasons crops of the private holdings. The percentage of different fertilizers applied is given using summary Table 9 as follows.

**Table 9. Summary of Fertilizer Applied Cropland Area for Private Holdings of 2020/21
(2013 E.C.) Belg season, National**

Fertilizer Type	Fertilizer Applied Area		Percentage from Total Belg Cropland Area
	Hectare	Percentage of Fertilizer Applied Area	
Natural Fertilizer	391,680.00	32.76	18.44
Commercial/Chemical Fertilizers			
DAP	32,610.00	2.73	1.54
Urea	57,969.00	4.85	2.73
Urea + DAP	7,580.00	0.63	0.36
NPS	412,608.00	34.52	19.42
NPS + Urea	215,534.00	18.03	10.15
Mixed (Blended)	34,332.00	2.87	1.62
Mixed (Blended)+Urea	43,129.00	3.61	2.03
Total Fertilizer Area	1,195,442.00	100.00	56.27
Total Cropland Area	2,124,387.00		100.00

As indicated in Summary Table 9, nearly 391,680.00 hectares (32.76% of the total fertilizer applied cropland area) is applied with natural fertilizer. This accounts 18.44% of the total Belg cropland area. The coverage of chemical fertilizers is estimated to be 803,762.00 hectares (40.20% from the total fertilizer applied area and 37.84% from the total cropland area). The application of DAP, UREA and the mixture of DAP and Urea, NPS and the mixture of NPS and Urea, Mixed (Blended) and the mixture of Mixed (Blended) and Urea ,collectively, called as commercial fertilizers, constitute 2.14%, 3.07%, 2.47%, 34.46 %, and 19.43 % of the total fertilizer applied cropland area, respectively. The percentages of DAP, UREA, the mixture of DAP and Urea, NPS and the mixture of NPS Mixed (Blended) and the mixture of Mixed (Blended) and Urea applied out of the total cropland area of the Belg season are: 1.54, 2.73, 0.36, 19.42, 10.15, 1.62 and 2.03 respectively.

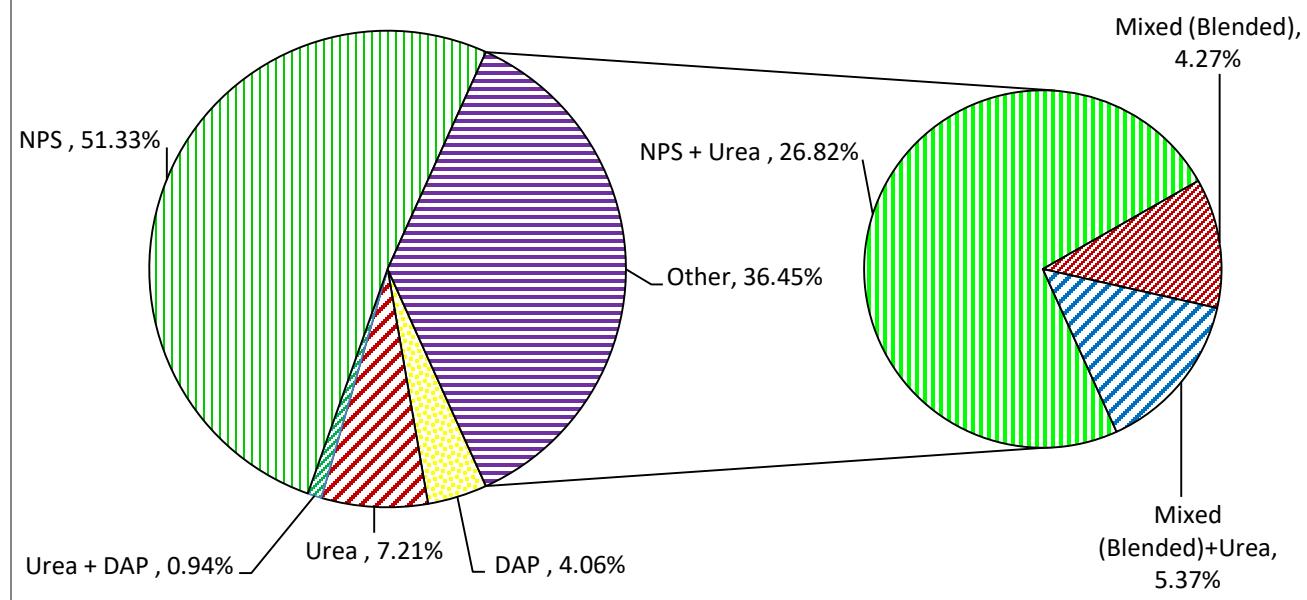

4.4 THE USE OF NATURAL FERTLIZER

In general, the application of natural fertilizers for Belg season crops in 2020/21 (2013 E.C.) vary from crop to crop. Of the total area under natural fertilizer, the highest proportion was reported for maize crop, which was estimated at 161,237 hectares (41%). The fertilized area (natural fertilizer) under red haricot beans stood second with 55,600 hectare (14.14%) while Potatoes stands third accounting for 37,981 hectare (9.66%) of the total country level natural fertilizer applied of Belg season cropland area.

4.5. THE USE OF COMMERCIAL FERTLIZERS

The total cropland area under commercial fertilizers is about 2020/21 (2013 E.C.) hectare (67.24% of total fertilizer applied cropland area), in 2020/21 (2013 E.C.) Belg season. Out of this, NPS is the most used fertilizer which accounted for about 412, 608 hectare (51.33% of the commercial fertilizer applied area). The second most applied commercial fertilizer is the mixture of NPS and Urea (NPS + UREA) covering 215,534 hectare (accounting for 26.82%) while the use of UREA stands in the third position applied on 57, 969 hectare (7.21) of the total commercial fertilizer applied area. This is more indicated using graph and presented as follows:-

Figure 4: Percentage Distribution of Chemical Fertilizer Applied Cropland Area by Fertilizer Type for Private Holdings of Belg 2020/21 (2013 E.C)

The commercial fertilizers applied area vary between crops. The highest area is reported for potatoes accounting for 737,815 hectares (223.55%) followed by maize which is 412,146 hectares (22.19% of commercial fertilizer applied area), which is more illustrated in the statistical table below.

Table 10. Summary of Fertilizer Chemical Fertilizer Applied Cropland Area Rank for the Major Three Crops for Private Holdings of 2020/21 (2013 E.C.) Belg season, National

Crop type	Chemical fertilizer Applied Area		Rank
	Hectare	Percentage	
Potatoes	189,305	23.55	1 st
Maize	178,360	22.19	2 nd
Barley	128,882	15.29	3 rd

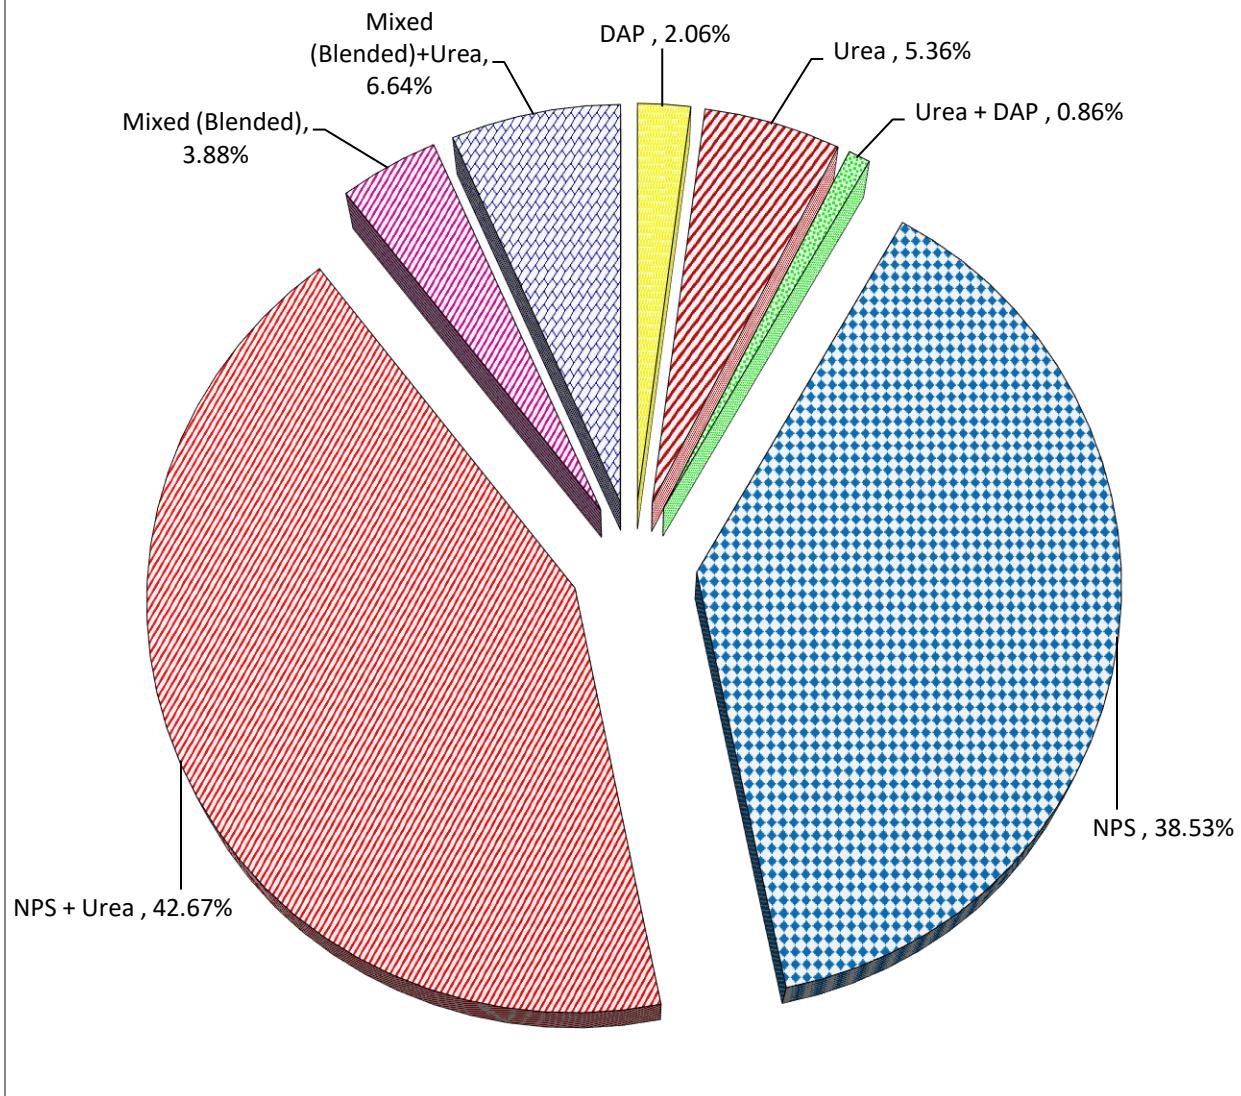

Region-wise, the distribution of both natural and commercial fertilizers applied varies from region to region. For instance, of the total area under both (Natural + Commercial) fertilizers, the highest was reported for S.N.N.P region accounting for nearly 479,492 hectare (41.62% of total fertilized area). Oromia region accounted for 470,280 hectares (39.34%) of the total country level of both natural and commercial fertilizers applied cropland area) while Amhara region accounted nearly 174,170 hectare (14.57%).

Table 11. Summary of Chemical Fertilizer Applied Cropland Area Rank By Region for Private Holdings of 2020/21 (2013 E.C.) Belg season, National

Region	Crop type	All Fertilizer			
		Area Hectare			Quintal
		Estimate	%	Rank	
National	All	1,195,442.00			2,345,435.00
SNNP	All	497,492.00	41.62	1ST	518,180.00
Oromia	All	470,286.00	39.34	2nd	773,352.00
Amhara	All	174,170.00	14.57	3rd	846,203.00
Sidama	All	43,905.00	3.67	4th	200,828.00
Benishangul Gumuz	All	7,479.00	0.63	5th	1,333.00
Dire Dawa	All	630.00	0.05	6th	2,718.00
Hareri	All	553.00	0.05	7th	1,264.00
Afar	All	483.00	0.04	8th	393.00
Somali	All	340.00	0.03	9th	963.00
Gambela	All	104.00	0.01	10th	200.00

In terms of quantity, the total commercial fertilizer applied is 2,345,435 quintals. Out of this, the mixture of NPS and Urea is the most applied commercial fertilizer accounting for 1,000,7718 quintals (42.67%). The percentage distribution of the chemical fertilizers applied during the production season is more indicated by Figure 6.

Figure 6. Percentage Distribution of Quantity of Chemical Fertilizers Applied by Fertilizer Type for Private Holding of 2020/21 (2013 E.C) Belg Season, National

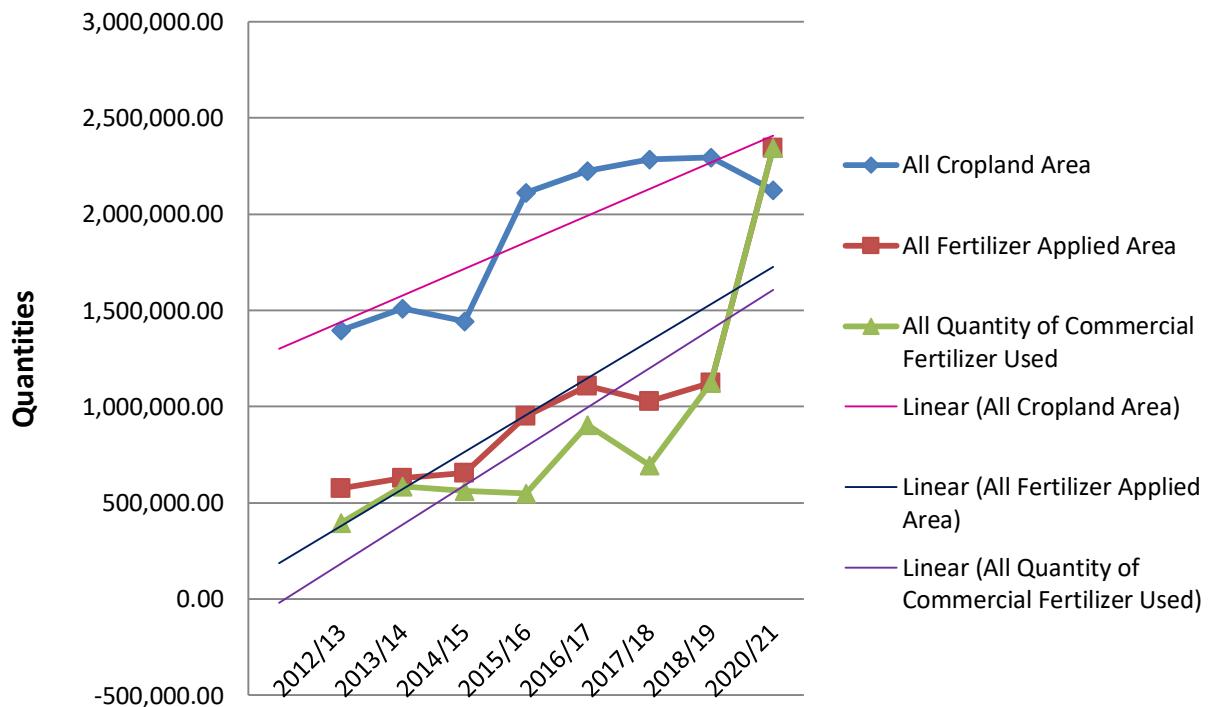

As indicated in Figure 6, the mixture of NPS and Urea (NPS + Urea) is the first most applied chemical fertilizer (1,000,771qt, 42.62%), application of NPS is the second most applied fertilizer type which is about 903,748 quintals (38.53%) while Urea+DAP is the least type of chemical fertilizer applied accounting about 20, 134 quintals (0.86%).

4.6. ALL CROPLAND AREA AND TRENDS OF THE USE OF COMMERCIAL FERTLIZERS

Figure 7 shows the trends of (the summary results of the previous seven consecutive surveys undertaken on yearly bases) all cropland area, total fertilizer applied area and total amount of commercial fertilizer applied over the period 2012/13 up to 2017/18. The examination of the consecutive Belg season agricultural sample survey results display an increasing trend of all crop land area (about by 7.30%), fertilizer applied area (nearly by 26.55%) and amount of chemical fertilizer (by 36.15%) used over time.

Figure 7: Trends of All Belg Cropland Area, All Fertilizer Applied Area and Quantity of Commercial Applied Fertilizer and Production Over Time

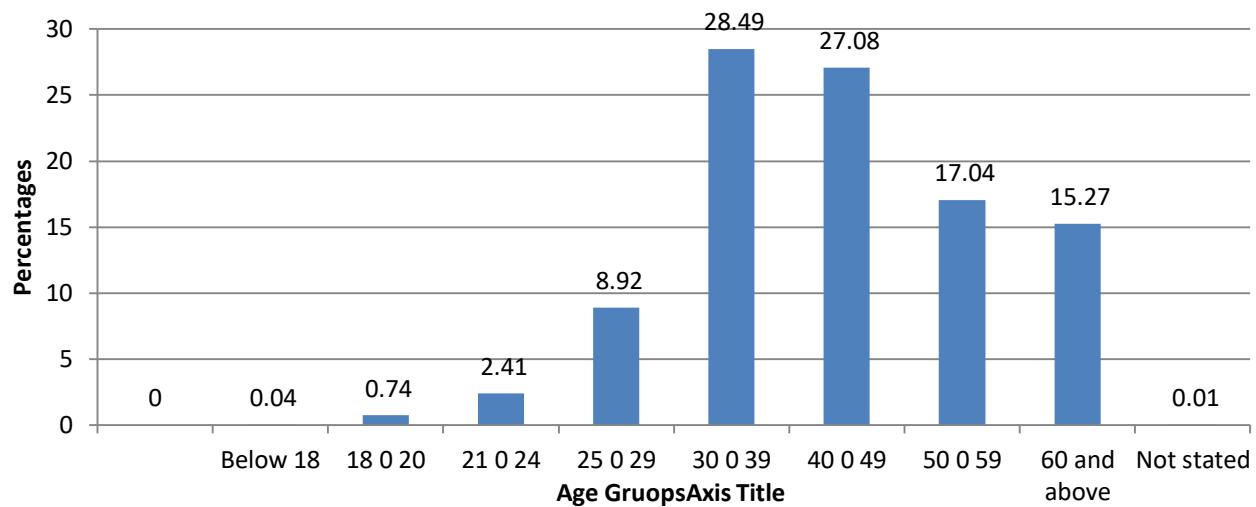

4.7. THE USE OF IMPROVED SEEDS

Better application of improved variety seeds helps to harvest higher yield compared to the use of traditional variety seeds. The survey findings indicate that the total crop area applied with improved seed is nearly 285,363 hectare while total quantity used is 200, 963 quintals, at country level. The area applied with improved seed is about 13.46% of the total Belg 2011E.C cropland area. The total quantity of improved seeds used is nearly 11.19% of the total seeds used during the season.

4.8. NUMBER OF BELG CROP PRODUCING HOLDERS REPORTING THE USE OF IMPROVED FARM MANAGEMENT PRACTICES BY AGE

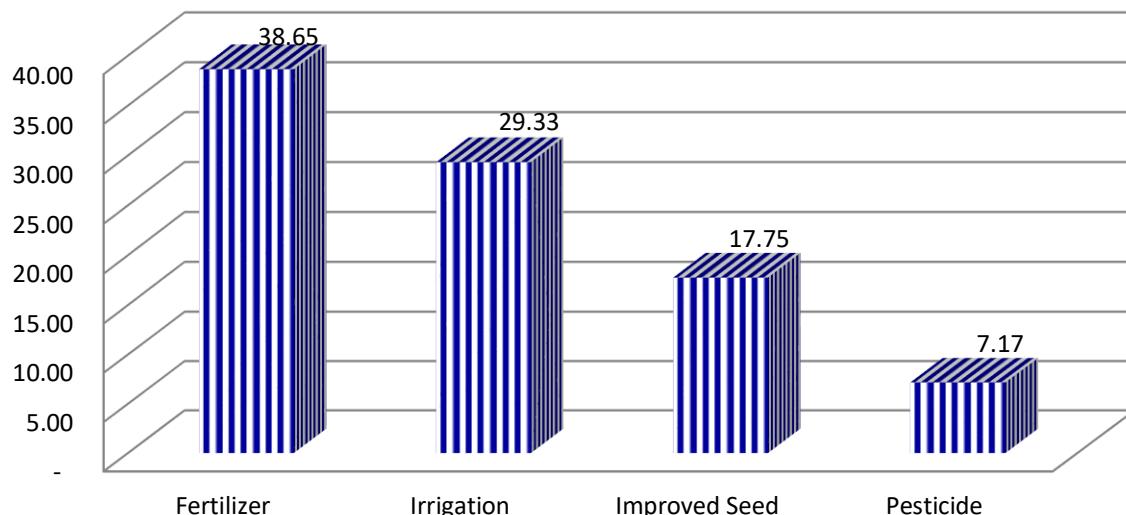

To easily identify the age category of the holders who used to earn the economic benefits generated from practicing the use of modern farm management practices on their holdings, Belg crop producing holders' have been categorized into nine groups. These areage groups below 18 years, 18 to 20 years, 21 to 24 years, 25 to 29 years, 30 to 39 years, 40 to 49 years, 50 to 59 years, 60 years and above as well as not stated holders groups. The survey result shows that a total of 12,168,676 holders were engaged in the overall Belg season agricultural activities in 2020/21 (2013 E.C.). Accordingly, the category with the largest number of holders is in the age group 30-39, with 3,466,948 holders (which is 28.49% of the total holders). The age group of 40 to 49 stands second with 3,295,152 holders (27.08% of total holders). The percentage distribution and number of Belg crop producing holders reporting the use of farm inputs by age group for private holding is given in Figure 8 and Table 21.

Figure 8:Percentage Distribution of Belg, 2013EC Crop Grwion Holdres By Age Group

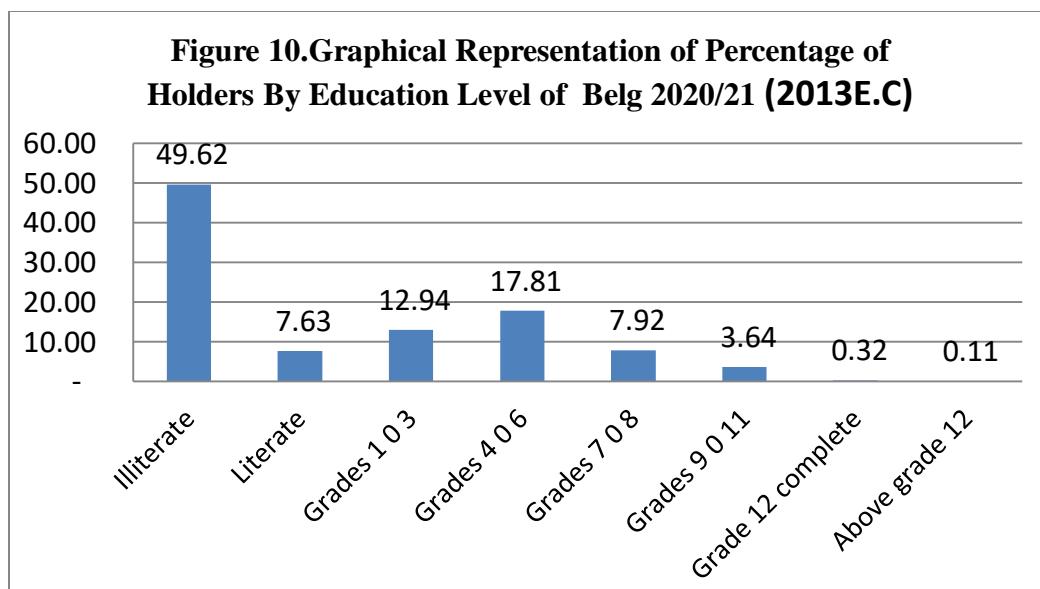

Moreover, 4,703,104 holders (38.65 % of total holders) used fertilizer and 2,160,336 holders (45.93 %) used improved seeds. Likewise, 872,028.00 holders (7.17%) applied pesticides and 1,379,263 holders (7.17 %) used irrigation at national level for 2020/21 (2013 E.C.). Belg season, in order to obtain higher crop yield (See Figure 8 below and Table 21).

Figure 9.Graphical Representation of Percentage of Holders Using Inputs for Belg 2018/19 (2011E.C)

4.7 NUMBER OF BELG CROP PRODUCING HOLDERS REPORTING THE USE OF IMPROVED FARM MANAGEMENT PRACTICES BY EDUCATIONAL STATUS

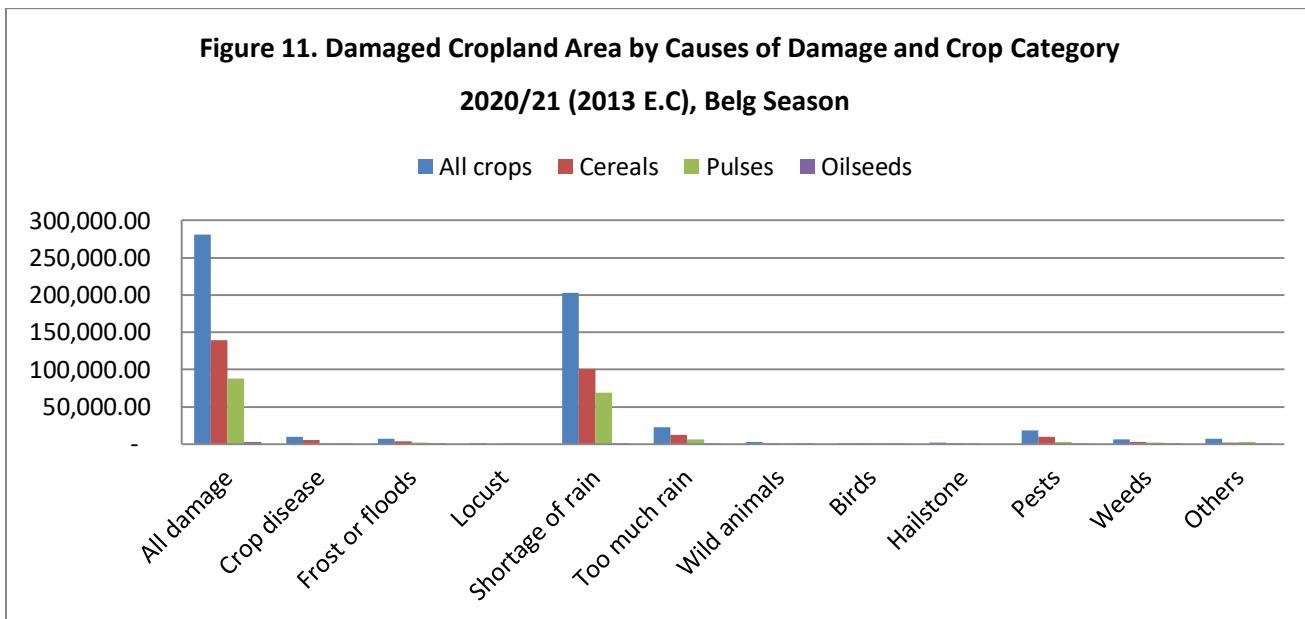

Holders educational status play important role in the adoption of new and improved farming technologies. Therefore, in this report, an attempt is made to categorize holders reporting the use of modern farming practices during the 2020/21 (2013 E.C) Belg season crop production based on their educational status. Based on their education level, holders are categorized in to eight groups consisting of illiterate, literate, grade 1 to 3, grade 4 to 6, grade 7 to 8, grade 9 to 11, grade 12 complete and above grade. The number of Belg crop producing holders using different farm inputs based on education is graphically presented in Figure 9.

According to the results of the 2020/21 (2013 E.C) Belg season crop production sample survey, out of the total number of holders (12,168,676), the largest category of the holders number is under the illiterate category in which the number of all crop holders is 6,037,684 (which accounts for 49.62 % of total holders) (See Figure 10). Under this category, 2,186,199 holder are reported for using fertilizer, 9,176,54 holders using improved seeds, 366,155 using pesticides and 75,3815 using irrigation. The second largest category of the number of holders lies on education level of grade four to six. Within this category, the number of holders reported for using all cropland is 1,398,211. The respective number of holders is 881,973 for fertilizer, 480,916 for improved seeds, 191,115 for pesticides and 152,100 for irrigation in the education category.

4.8 NUMBER OF HOLDERS REPORTING CROP DAMAGE BY CAUSES OF DAMAGE

The total number of Belg crop producing private peasant holders who reported crop damage and the cause of damage during the year 2020/21 (2013 E.C), Belg season are estimated to be about 2,124,387 and the damaged cropland area was estimated to be 280,766 hectares. For illustration purpose, the total cropland area affected by crop damage of different crop types in hectare and the various causes of crop damage are presented graphically in Figure 11.

As indicated in Figure 11, the highest cropland area damaged was reported for cereals which is 139,610 hectares, followed by pulses with about 87,976 hectares and oil crops with 2,540 hectares. With regard to the causes of crop damage, it is reported that 203,102 hectares (72.34%) was damaged due to shortage of rain. The second highest cause of crop damage is too much rain with estimated crop damaged area of 23,000 hectares (8.19%), while others causes of crop damage stands third position in damaging 47629 hectare (16.96%) cropland area (For further details, see Figure 11).

APPENDIX I

Estimation Procedures of Totals,

Ratios and Sampling Errors

APPENDIX I Estimation Procedures of Totals, Ratios and Sampling Errors

The following formulas were used to estimate total area of land under specific crop and production of specific crop in a stratum.

1. For Estimating Total Area of Land under Specific Crop:

$$\hat{A}_h = \sum_{i=1}^{n_h} W_{hi} \sum_{j=1}^{h_{hi}} a_{hij} = \sum_{i=1}^{n_h} W_{hi} a_{hi}$$

in which, $W_{hi} = \frac{M_h H_{hi}}{n_h m_{hi} h_{hi}}$ is the basic weight.

Where:

h represents the stratum

n_h is the total number of sample EAs successfully covered in the h^{th} stratum.

M_h is the measure of size of the h^{th} stratum as obtained from the sampling frame.

m_{hi} is the measure of size of the i^{th} sample EA in the h^{th} stratum obtained from the sampling frame.

H_{hi} is the total number of agricultural households of the i^{th} sample EA in the h^{th} stratum.

h_{hi} is the number of sample agricultural households successfully covered in the i^{th} sample EA in the h^{th} stratum.

a_{hij} is the value of area for agricultural household j , in the i^{th} EA in the h^{th} stratum under a specific crop.

a_{hi} is the sample total area under specific crop for EA i in stratum h

\hat{A}_h estimate of total area under specific crop in stratum h

2. For Estimating Total Number of Holders :

$$Y_h = \sum_{i=1}^{n_h} W_{hi} H_{hi}$$

in which, $H_{hi} = a_{hi} * \bar{Y}_{hi}$

Where,

\bar{Y}_{hi} is average yield per square meter of a specific crop in the i^{th} EA in the h^{th} stratum.

H_h is estimate of total quantity of production of a specific crop in the h^{th} stratum.

H_{hi} is estimate of total quantity of production under specific crop for EA i in stratum h .

3. Sampling Variance of Estimates:

Sampling variance for the estimate of stratum total of area, production and yield for a specific crop are estimated by the following formulas.

$$\text{Var}(\hat{A}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{A}_{hi} - \frac{\hat{A}_h}{n_h} \right)^2 + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{A}_{hij} - \frac{\hat{A}_{hi}}{h_{hi}} \right)^2$$

$$\text{Var}(\hat{P}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{P}_{hi} - \frac{\hat{P}_h}{n_h} \right)^2 + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{P}_{hij} - \frac{\hat{P}_{hi}}{h_{hi}} \right)^2$$

Where,

f_h = average first stage probability of selection of EAs within stratum h .

$f_{hi} = \frac{h_{hi}}{H_{hi}}$ = average second stage probability of selection within the i^{th} sample EA in stratum h .

$\hat{A}_{hi}, \hat{P}_{hi}$ are weighted total area and production, respectively, of a specific crop in the i^{th} EA and h^{th} Stratum.

$\hat{A}_{hij}, \hat{P}_{hij}$ are weighted values of area and production, respectively, from j^{th} agricultural household in the

ith EA and hth stratum under a specific crop.

Since all strata are independent, the total variance at regional and country level is computed by aggregating the result obtained at Zone/Special Wereda level, i.e.

$$Var(\hat{A}) = \sum_h^L Var(\hat{A}_h), Var(\hat{P}) = \sum_h^L Var(\hat{P}_h)$$

Where, L is the number of strata (Zone/Special Wereda).

In estimating the sampling variance by the above formula, selection of EAs within a stratum is assumed to be with replacement. By so doing the variance estimate may be slightly over estimated but it greatly simplifies the estimation procedure.

4. Coefficient of Variation (CV) of Estimates:

Coefficient of Variation (CV) in percentage of estimate of stratum total of area and production for a specific crop are given by:

$$CV(\hat{A}_h) = \frac{\sqrt{Var(\hat{A}_h)}}{\hat{A}_h} * 100, CV(\hat{P}_h) = \frac{\sqrt{Var(\hat{P}_h)}}{\hat{P}_h} * 100,$$

5. Ninety-five Percent Confidence Interval (CI) of Stratum Total of Area:

$$\hat{A}_h \pm 1.96 * SE(\hat{A}_h) ,$$

Where $SE(\hat{A}_h) = \sqrt{Var(\hat{A}_h)}$ is standard error of the estimate of the stratum total of area.

Estimates of standard error and confidence interval for the other estimates can also be calculated by adopting the above formulas.

APPENDIX II

APPENDIX IV

QUESTIONNAIRE

Form AgSS 2013/8
CENTRAL STATISTICAL AUTHORITY
ETHIOPIAN AGRICULTURAL SAMPLE SURVEY 2020/21 (2013 E.C)

PART I – IDENTIFICATION PARTICULARS

1	2	3	4	5	6	7	8	9	10	11	12	13	14
REGION	ZONE	WEREDA	PA / REST. AR	EA LOCAL	HH ID	HH HEAD SEX 1=M 2=F	HOLDER ID	HOLDER'S NAME AGE SEX M=1 F=2			HIGHEST GRADE COMPLETED	HOLDER'S HH SIZE	FARMING TYPE CROP=1 LIVEST=2 BOTH=3

PART II – CROP FIELD / OTHER LAND USE

15	16	17		
SER. NO.	QUESTIONS FOR THE HOLDER	PARCEL NO.	FIELD NO.	
		IS THE FIELD MIXED CROP =2	PURE STAND =1 OTHER LAND USE=3	
		CROP/OTHER NAME	CROP NAME	CROP NAME
		CODE	CODE	CODE
1	Ownership Own =1 Rented in =2 Other =3			
1.1	For how much did you rent this plot? If it is your own, how much would you pay if you rent it? (If it is share cropped in, estimate the share of the production that you will share to the owner of the plot in birr).			
2	Is field under Extension Program? Yes =1 No = 2			
3	Is Field Irrigated? Yes =1 No =2			
3.1	If Field Irrigated source of water. River =1 Lake =2 Pond =3 Harvested water =4 other =5			
3.2	Type of irrigation: Full/conventional irrigation = 1 Supplemental irrigation = 2			
4	How many times was the field tilled in this production season? Zero tillage (direct drill/seedling) = 1 Tilled once = 2 Tilled two times = 3 Tilled three or more times = 4 Not at all(not cultivated) = 5			
4.1	Slope of the field/plot: Plain = 1 partially slopy = 2 slopy = 3			
5	Did you use prevention methods against soil erosion on this field? Yes = 1 No = 2 → Q6			
5.1	If the answer to Q5 is Yes, main soil erosion preventive method used: Terracing = 1 Bund = 2 Planting trees = 3 Plough across the contour = 4 Rotational grazing = 5 avoiding grazing = 6 Creating grassed waterways = 7 Other (specify) = 8			
6	Do you apply any method to maintain /improve soil organic matters on this field/plot? Yes = 1 No = 2 → Q7			
6.1	(If the response to Q6 is YES, what method do you mainly used? Growing annual crops in rows between perennial crops = 1 maintaining continuous soil cover (residues) = 2 Maximizing the use of organic matter sources =3 Using appropriate placement of nitrogen fertilizers = 4 Avoiding grazing = 5 Increasing the complexity of the crop rotations = 6 intercropping the complexity crop rotations with leguminous crops = 7 other = 8			
7	How was the seed planted/ sowed? (For only Temporary crops) Broadcasting = 1 Row planting = 2			

8	If more than one crop grown or if crops were intercropped, give the percentage of land devoted to each crop (the total percentage should equals 100).				
9	Type of seed/seedling sowed/planted: Improved seed = 1 local seed = 2 → Q16				
10	10.1 If code 1 for Q9, the seed used was: (For only Temporary crops) New improved seed for this production season = 1 Improved seed left over from last year production season = 2 Improved seed saved from previous harvest = 3 (if Code 2 or 3 for Q13.1,→ Q16)				
	10.2 If code 1 for Q9, From whom/or institution did you obtain/purchase the seed? Code (a): (codes are available in enumerators manual).				
11	(For Cereals, Pulses and Oil seeds only:) If improved seeds are used, (If code 1 for Q10.1, quantity of seed used (in Kg) (For Cereals, Pulses and Oil seeds only:) If improved seeds are used, (If code 1 for Q10.1, quantity of seed used (in Kg)	Kilo	Gram	Kilo	Gram
12	(For Cereals, Pulses and Oil seeds only): If improved seeds are used, (If code 1 in Q10.1), Total cost of seed (Birr) (For Cereals, Pulses and Oil seeds only): If improved seeds are used, (If code 1 in Q10.1), Total cost of seed (Birr)	Birr	Cents	Birr	Cents
113	For Cereals, Pulses & Oilseeds only Quantity of indigenous seeds used	Kilo	Gram	Kilo	Gram
13.1	(for only cereals, pulses and oil seeds): cost of local seed used (in Birr).	Birr	Cents	Birr	Cents
14	Was there any crop damage on this field? Yes = 1 No =2				
15	If yes in question number 10, Cause of damage → Code →				
16	Percent of damaged crop				
17	Prevention/precaution measure taken? Yes =1 No =2				
18	Type of measure if any? Chemical = 1 Non – chemical = 2 Both = 3				
19	Chemical type used if any. Pesticide =1 herbicide =2 Fungicide =3 1&2 = 4 1 & 3 = 5 2 & 3 = 6 All = 7				
19.1	Quantity of chemical used	Pesticid Quantity	herbicide UoM	Fungicide Quantity	UoM
19.2	Price of quantity of chemical used	Pesticid Birr	herbicide Cents	Fungicide Birr	Cents
20	Is Fertilizer Used? Yes =1 No = 2				
21	Type of fertilizer used if any? Natural = 1 Chemical = 2 Both = 3				
	If chemical fertilizer used 22.1 Type UREA = 1 DAP = 2 Both = 3 NPS=4 NPS & DAP=5				
	22.2. . Quantity of chemical fertilizer applied to the field (by fertilizer type)	Urea Killo	DAP Gram	NPS Killo	Blended Gram
	22.3 Total Cost of chemical fertilizer applied, by fertilizer type, (in Birr)	Urea Birr	DAP Cents	NPS Birr	Blended Cents

23	If natural fertilizer used, type Manure = 1 Compost = 2 Organic = 3 1 &2 = 4 1&3 = 5 2 & 3 = 6 All = 7 others = 8									
24	Quantity of crop produced in standard/local measurement	Name	Code	Quantity	Name	code	Quantity	Name	Code	Quantity
24.1	Howm much is . . .local unit is 1 quintal									
25	Number of oxen/other animals used during land clearing, land preparation and planting.									
25.1	Total cost paid for animal services (oxens/other animals) during land clearing, land preparation and planting (if own animals used, estimated cost)									
					M	F	C			
26	Number of days family members spent on this field during land clearing, land preparation and planting (in perso-days).									
26.1	Estimated cost for family members participated on this field during land clearing, land preparation and planting.(in Birr)									
27	Number of days hired persons spent during land clearing, land preparation and planting.(in person-days)									
27.1	Total cost for hired persons during land clearing, land preparation and planting.(in Birr)									
28	Labour sharing (debo, wenfel,...): number of days persons in the work party spent during land clearing, land preparation and planting.(in person-days)									
28.1	Total cost paid for persons participated in the work party, (including spent in the form of foods, drinks, ...) (in Birr)									
29	Total cost spent for mantionary service (if own mationary used, estimate in monetary value)									
30	Total cost spent for animal service for transport during land clearing, land preparation and planting.									

M = Male, F = Female , C = Children (under 15 years of age)

FORM 2A: SECTION 3: Area of field/plot measured by (GPS, Compass Rope, or Measurer) (Meher 2013 E.C)
