THE FEDRAL DEMOCRATIC REPUBLIC OF ETHIOPIA

CENTRAL STATISTICAL AGENCY

WELFARE MONITORING SURVEY 2011

Statistical Report

Basic Population Characteristics, Education, Health, Child Care and Breast Feeding

VOLUME I

April 2012 Addis Ababa

STATISTICAL BULLETIN

TABLE OF CONTENTS

TABLE OF CONTENTS LIST OF TABLES ACRONYMS

CHAPTER I INTRODUCTION

- 1.1 Overview
- 1.2 Objectives Of The Welfare Monitoring Survey
- 1.3 Training, Organization of the Fieldwork, Data Collection and Supervision
- 1.4 Data Processing

CHAPTER II SURVEY METHODOLOGY

- 2.1 Coverage
- 2.2 Concepts and Definitions
- 2.3 Sampling Frame
- 2.4 Sample Design
- 2.5 Sample Size and Selection Scheme

STATISTICAL TABLES

Basic Population Characteristics

Education Related Indicators

Health and Related Indicators

Child Care, Breast Feeding and Harmful Traditions

Statistical tables For Addis Abeba

ANNEXES

ANNEX I Estimation procedure of Total, Ratio and Sampling Error

ANNEX II Standard Errors and Coefficients of Variation for Estimates

ANNEX III Regional Distribution of the 2011 WMS Sample EA's and Households

ANNEX IV Questionnaire for the 2011 Welfare Monitoring Survey

LIST OF STATISTICAL TABLES

	BASIC	POPULATION CHARACTERSTICS
Table	3.1(a)	Total Number of Population by Age Group, Sex and Region - Country Level - 2011
Table	3.1(b)	Total Number of Population by Age Group, Sex and Region - Country Rural – 2011
Table	3.1(c)	Total Number of Population by Age Group, Sex and Region - Country Urban – 2011
Table	3.1(d)	Total Number of Population by Age Group, Sex and Major Urban Centers – Major Urban Centers – 2011
Table	3.2(a)	Distribution of Households by Household size, Sex of Household head and Region - Country Level - 2011
Table	3.2(b)	Distribution of Households by Household size, Sex of Household head and Region - Country Rural - 2011
Table	3.2(c)	Distribution of Households by Household size, Sex of Household head and Region - Country Urban - 2011
Table	3.2(d)	Distribution of Households by Household size, Sex of Household head and Major Urban Centers – Major Urban Centers – 2011
	EDUCA	ATION RELATED INDICATORS
Table	4.1(a)	Literacy and Numeracy Rate of Population Aged 10 Years and Above by Sex and Region - Country Level – 2011
Table	4.1(b)	Literacy and Numeracy Rate of Population Aged 10 Years and Above by Sex and Region - Country Rural – 2011
Table	4.1(c)	Literacy and Numeracy Rate of Population Aged 10 Years and Above by Sex and Region - Country Urban – 2011
Table	4.1(d)	Literacy and Numeracy Rate of Population Aged 10 Years and Above by Sex and Major Urban Centers – Major Urban Centers – 2011
Table	4.2(a)	Distribution of Population Aged 10 Years and Above by Highest Grade Completed, Sex and Region - Country Level - 2011
Table	4.2(b)	Distribution of Population Aged 10 Years and Above by Highest Grade Completed, Sex and Region - Country Rural - 2011
Table	4.2(c)	Distribution of Population Aged 10 Years and Above by Highest Grade Completed, Sex and Region - Country Urban - 2011
Table	4.2(d)	Distribution of Population Aged 10 Years and Above by Highest Grade Completed, Sex and Major Urban Centers – Major Urban Centers – 2011
Table	4.3(a)	School Enrollment Ratios For Grades 1-4 and 5-8 by Sex and Region - Country Level – 2011
Table	4.3(b)	School Enrollment Ratios For Grades 1-4 and 5-8 by Sex and Region- Country Rural - 2011
Table	4.3(c)	School Enrollment Ratios For Grades 1-4 and 5-8 by Sex and Region - Country Urban - 2011
Table	4.3(d)	School Enrollment Ratios For Grades 1-4 and 5-8 by Sex and Major Urban

		Centers – Major Urban Centers – 2011
Table	4.4(a)	School Enrollment Ratios For Grades 1-8 and 9-12 by Sex and Region - Country Level – 2011
Table	4.4(b)	School Enrollment Ratios For Grades 1-8 and 9-12 by Sex and Region - Country Rural - 2011
Table	4.4(c)	School Enrollment Ratios For Grades 1-8 and 9-12 by Sex and Region - Country Urban - 2011
Table	4.4(d)	School Enrollment Ratios For Grades 1-8 and 9-12 by Sex and Major Urban Centers – Major Urban Centers – 2011
Table	4.5(a)	Distribution of Enrolled individuals by Type of School and Region - Country Level – 2011
Table	4.5(b)	Distribution of Enrolled individuals by Type of School and Region - Country Rural – 2011
Table	4.5(c)	Distribution of Enrolled individuals by Type of School and Region - Country Urban – 2011
Table	4.5(d)	Distribution of Enrolled individuals by Type of School and Major Urban Centers – Major Urban Centers – 2011
Table	4.6(a)	Education Drop-outs for Grade 1-4 and 5-8 by Sex and Region - Country Level-2011
Table	4.6(b)	Education Drop-outs for Grades 1-4 and 5-8 by Sex and Region - Country Rural-2011
Table	4.6(c)	Education Drop-outs for Grades 1-4 and 5-8 by Sex and Region - Country Urban-2011
Table	4.6(d)	Education Drop-outs for Grades 1-4 and 5-8 by Sex and Major Urban Centers – Major Urban Centers – 2011
Table	4.7(a)	Education Drop-outs for grades 1-8 and 9-12 by Sex and Region - Country Level – 2011
Table	4.7(b)	Education Drop-outs for grades 1-8 and 9-12 by Sex and Region - Country Rural – 2011
Table	4.7(c)	Education Drop-outs for grades 1-8 and 9-12 by Sex and Region - Country Urban – 2011
Table	4.7(d)	Education Drop-outs for grades 1-8 and 9-12 by Sex and Major Urban Centers – Major Urban Centers – 2011
Table	4.8(a)	Distribution of Persons 5 Years and Above for grade 1-4 by Reasons for Dropouts and Region - Country Level - 2011
Table	4.8(b)	Distribution of Persons 5 Years and Above for grade 1-4 by Reasons for Dropouts and Region - Country Rural - 2011
Table	4.8(c)	Distribution of Persons 5 Years and Above for grade 1-4 by Reasons for Dropouts and Region - Country Urban - 2011
Table	4.8(d)	Distribution of Persons 5 Years and Above for grade 1-4 by Reasons for Dropouts and Major Urban Centers – Major Urban Centers – 2011

Table	4.9(a)	Distribution of Persons 5 Years and Above for grade 5-8 by Reasons for Dropouts and Region - Country Level - 2011
Table	4.9(b)	Distribution of Persons 5 Years and Above for grade 5-8 by Reasons for Dropouts and Region - Country Rural - 2011
Table	4.9(c)	Distribution of Persons 5 Years and Above for grade 5-8 by Reasons for Dropouts and Region - Country Urban - 2011

CHAPTER I

INTRODUCTION

1.1 Overview

The level and distribution of poverty in Ethiopia is declining from time to time and a remarkable economic growth has been observed. According to the results obtained from the 1999/00 Household Income, Consumption and Expenditure Survey and Welfare Monitoring Survey of the Central Statistical Agency (CSA), about 44 percent of the total populations (45 percent in rural areas and 37 percent in urban areas) were found to be below poverty line, while the 2004/05 surveys showed that 39 percent of the total population were under the poverty line out of which 39 percent in rural areas and 35 percent in urban areas. The interim report on poverty analysis study prepared by MoFED using the 2010/11 HCES and WMS reveals that the poverty line declined to 29 percent.

The country together with development partners has put poverty reduction strategies high on the agenda and working firmly on the implementation program over the past two decades. The government accordingly coordinated the design and implementation of the Sustainable Development and Poverty Reduction Program (SDPRP) from year 2002/03 to 2004/05 and a Plan for Accelerated and Sustained Development to the End Poverty (PASDEP) from the year 2005/06 to 2009/10. On the bases of experience gained, the council of ministers and the House of People's Representatives have adopted the Growth and Transformation Plan (GTP) as the national planning documents of the country for the period 2010/11 to 2014/15. Moreover, the current HCES and WMS surveys—also used as a springboard for monitoring and evaluation of the five years growth and transformation plan of Ethiopia.

In light of the plan to reduce poverty over time, strong system of monitoring and evaluation has also been put in place. Consequently, the issue of welfare monitoring in Ethiopia arose as part of the Economic Reform Program (ERP). The ERP specifically and strongly underlies to see the effects of the reform program on poverty and building the analytical capacity of the government to monitor and evaluate such effects. To this end, the government has established a Welfare Monitoring System in 1995 to oversight the following major activities:

- Establish an information system that provides a continuous picture of the poverty scenario in the country;
- Indicate the impact of reform programs on the level of household welfare;
- Establish follow-up procedures on the various programs and activities targeted towards poverty reduction and
- Conduct regular statistical surveys to assess, in particular, the efficiency of targeted programs.

CSA and Welfare Monitoring Unit (WMU) of Ministry of Finance and Economic Development (MoFED) have been the key actors in the M&E system in place by way of producing, analyzing and disseminating poverty related data and results. In line with strengthening the established M&E system of the government, CSA and WMU of MoFED had submitted a financial requirement proposal (entitled: Strengthening Data Collection, Analysis and Dissemination on Poverty Monitoring and the MDGs) to the Development Assistant Group (DAG). Following the signing of the Memorandum of Understanding (MOU) between MoFED, CSA and the donors, various implementation activities have also been carried out.

In order to meet the data needs of the Welfare Monitoring System, CSA has been conducting Household Consumption and Expenditure Survey (HCES) and Welfare Monitoring Survey (WMS) since 1995/96. HCES and WMS surveys provide crucially useful and poverty related information for the designing and monitoring and evaluation of the country's poverty reduction strategy, Sustainable Development and Poverty Reduction Program (SDPRP), various socioeconomic policies and programs and hence monitor the progress towards meeting the Millennium Development Goals (MDGs). The two surveys are inseparable and provide basic data that reflect the standard of living of households, individuals and the society as a whole.

HCES basically provides data on consumption and expenditure of households that reflect the income dimension of poverty while WMS aims at providing socioeconomic data that reflects the non-income dimension of poverty. WMS provides basic indicators on the various socioeconomic areas including health, education, access to and utilization and satisfaction of basic facilities/services and related non-income aspects of poverty.

WMS has been conducted together with HCES in 1995/96, 1999/2000 and 2004/05 and has also been carried out alone in 1997 and 1998. Several reports have been produced based on the previous surveys including the statistical reports produced by CSA. These are reports on the 1995/96 HICES and WMS, report on the 1999/2000 HICES and WMS, summary reports for the 1999/2000 HICES and WMS and report on the 1998 WMS survey as well as the two in-depth analytical reports on poverty situation of the country produced by Ministry of Finance and Economic Development. The 2011 survey has been improved to accommodate user's needs as much as possible. New feature in the current survey include harmful traditional practices (for household members aged 0-14 years).

This report shows detailed statistical tables at country and regional levels compiled for Rural, urban and Major Urban areas. This statistical report is divided in to two chapters. The first chapter covers introduction to the survey, where the overview and objectives of the survey, fieldwork and supervision, training of field staff, field organization, data collection, supervision and data processing activities are discussed briefly. In the second chapter, the survey methodology namely: coverage, concepts and definitions, sampling frame, sample design, sample size and selection scheme were noted. Furthermore, estimation procedures of total, ratio and sampling errors, standard errors and CVs of selected variables, coverage of the survey and the questionnaire in English version are presented in annex I, II, III and annex IV respectively. While the second volume presents access to selected basic facilities, housing, status of housing facilities and tenure, possession of household assets and selected indicators on food security, shocks and general living standard.

The 2011 WMS statistical reports at country, rural and urban levels are presented in two separate volumes. In this report (Volume I) basic population characteristics, education and health and their related indicators, child care, breast feeding and harmful traditional practice were presented. Furthermore, additional statistical tables that show data at country, rural, urban and major urban centers and Addis Ababa are provided in a CD for references.

1.2 Objectives of the Welfare Monitoring Survey

The main objective of the Welfare Monitoring Survey is to provide data that enable to understand the non-income aspects of poverty and has the following specific objectives:

- to assess the level, extent and distribution of non-income poverty;
- to assess the quality of life of households/individuals;
- to provide basic data that enables design, monitor and evaluate the impact of socioeconomic policies and programs on household's /individual's living standard;
- provide basic indicators on household's and individual's living standard with respect to basic needs including
 - ✓ Education, Health, Child Care and breast feeding, access to and utilization of basic facilities, Housing and housing amenities (drinking water, sanitation, energy, etc.), Household assets, selected indicators of living standard, harmful traditional practices and basic population characteristics.

1.3 Training, Organization of the Fieldwork, Data Collection and Supervision

Training of Field staff

Training was held in two stages. The first stage was training of trainers and took place at CSA head office. A total of 60 participants including professionals and sub-professionals from the Head Office, heads of the branch offices and the respective statisticians from each branch offices were trained at this stage. The second stage training involved training of 533 field staffs consisting of 366 enumerators and 167 supervisors and took place at six selected training centers throughout the country.

The training at the head office lasted for about 9 days focusing on theoretical discussions on concepts, definitions, principles of interview, how to complete the questionnaires and practical sessions which include mock interviews.

The second stage training lasted for about 12 days. The trainers at this stage were statisticians that were trained at the head office. The training was more detailed than the first stage in both

theoretical and practical aspects to ensure the full competence of the field staff in collecting the required information. In addition to the theoretical discussions on concepts, definitions and principles of interview and how to complete the questionnaires and etc, similarly done at the head office, field practices were included in the detail training program. Practical interviewing of households during training session helped to assess how well the theoretical class discussions were understood by all participants so that they could convey the same massage to enumerators and supervisors and also helped to examine the practical difficulties pertaining to the various socioeconomic groups, which would likely be encountered during the actual fieldwork.

Field Organization, Data Collection and Supervision

The branch offices mainly led by the Household Surveys and Price Statistics Directorate did the major work of the field organization. All the 25 branch offices of the CSA had fully participated in the survey undertaking, starting from recruitment/selection of field staff, organizing the second stage training, in deploying the field staff to their respective sites of assignment, field supervision and retrieval of the completed questionnaires to the head office where the data processing activities take place. They were also responsible for administering financial and logistics aspects of the survey. Additionally, line government organizations especially Kebele's had also a significant role in facilitating the fieldwork. Writing administrative letters that introduce the work and the enumerators to the local people particularly the sampled households, provision of field guides, etc were tasks of the local government units.

Welfare Monitoring Survey data collection has taken place from 27 April to 25 June 2011. A total of 366 enumerators and 167 field supervisors with an average supervisor-enumerator ratio of 1 to 2, 25 heads of branch offices and 25 statisticians were involved in the field work. To undertake the fieldwork, depending on the availability and the situation, four-wheel-drive vehicles and public transportations were used to deploy the working team all over the branch offices.

Interview method was basically used to gather information related to population characteristics, education, health, household based modules such as accessibility of facilities, household amenities, etc. Information was collected using questionnaires having nine modules following

subjective methods of data collection. Including the cover a total of 36 pages in (A4 size paper) questionnaire was prepared to collect data from selected households.

- Form 1: Demographic Characteristics and Economic Activity: In the first section of this form, demographic characteristics of the household members such as relationship to the head of household, sex, age and religion were asked from all members of the household. The second section deals with the current economic activities of the household members aged 10 years and above. Furthermore, this section also deals, whether a person is engaged in productive activity during the last seven days prior to the date of interview. In this part of the questionnaire, if the person is not engaged in any of productive activity, during the last seven days, the main reason for not engaging in productive activity was also asked. Moreover, the employment status, the occupation and industry for the main jobs were also collected from persons that were engaged in the economic activity or from those who were absent from work/temporarily lay off for that week.
- **Form 2**: **Education:** It consists among others, school attendance, dropout, reason for dropout, and literacy status were asked from all members of the household aged 5 years and above.
- **Form 3: Health:** In the first section of this form, health conditions of all members of the household during the last two months were collected. In the second section of the form, health information of the last 12 months was also collected to all members of the household.
- **Form 4: Child Care and Breast Feeding:** Data on birth history and breast feeding of children under age of five years were collected in this form.
- **Form 5: Housing Standard and Amenities:** In this form, the selected households were asked about their housing and kitchen standard, sanitation, drinking water, fuel and power facilities at the time of the survey, 12 months and 5 years before the survey.
- **Form 6: Household's Living Condition Indicators:** Consists of four main sections namely; food security indicators, status of crop production, source of income and major shocks affecting the households.
- Form 7: Access, Utilization and Satisfaction of Basic Facilities/Services: This form is used to collect data from the households like distance to service facilities and extent of utilization of the facilities, reason for not using the closest service facility and question on access, utilization and satisfaction of basic facilities.

Form 8: Ownership of Land, Dwellings and Other Buildings: This form was administered at household level and consists of four main sections namely: dwelling and land ownership status, utilization of land not owned by the household and about fixed assets owned by the household.

Form 9: Harmful traditional practice: This form is used to collect data for children aged 0-14 years about their harmful traditional practice such as, circumcision, cut of his/ her uvula and for ages less than two years particularly about childhood tooth

In the process of data collection, a regular supervision, which also is compulsory activity in CSA surveys, was undertaken at various levels to ensure the quality of the data. The permanent field supervisors were assigned to take care of the day-to-day supervision activities. Branch office statisticians and heads of the branch offices were also involved in a regular supervision. Most of the professionals that were engaged in the training of the field staff were also involved on the actual field supervision. Statistics Finland, management group and professionals from the Directorate have also made a field visit to oversee the operation as a whole.

1.4 Data Processing

The data processing activities were undertaken at the head office. The first stage of data processing activity was training of data editors and coders which were held at the head office by subject matter Directorate staffs. About 70 editors/coders were engaged in the manual editing and coding activities which lasted for about 60 days. Data entry took about 37 days using 125 computers and about 100 data encoders. Machine data cleaning, estimation with proper sampling weights and tabulation activities were carried out procedurally by the professional staff from the concerned Directorate at the head office. The Integrated Microcomputer Processing System (IMPS) complemented by CSPRO software were used for data entry, consistency checks and tabulation of survey results.

CHAPTER II

SURVEY METHODOLOGY

2.1 Coverage

The year 2011 Welfare Monitoring Survey covered all rural and urban areas of the country except the non-sedentary areas in Afar and Somali Regional States. Excluded are three zones of Afar and six zones of Somali Regions. In the rural part of the country it was planned to cover 864 enumeration areas (EAs) and 10368 households, whereas in the urban areas, it was planned to cover 1104 enumeration areas (EAs) and 17664 households. The response rate is highly satisfactory. Only two EAs and 67 households (owing to various reasons) were not covered in this survey. The ultimate response rate in the rural areas was therefore, 863 (99.9 percent) for EAs and 10347 (99.8 percent) for households, whereas, in the urban parts of the country the response rate of EAs and households was 11037 (99.9 percent) and 17618 (99.7 percent) respectively.

2.2 Concepts and Definitions

<u>URBAN CENTER</u>: in principle is defined as a locality with 2000 or more inhabitants. In this survey, however, for practical purposes an urban centre includes the following regardless of the number of inhabitants.

- i) All administrative capitals (Regional capitals, Zone and Wereda capitals),
- ii) Localities with Urban Dweller's Association (UDAs) not included in (i),
- iii) All localities which are not included either in (i) or (ii) above having a population of 1000 or more persons, and whose inhabitants are primarily engaged in non-agricultural activities.

<u>URBAN DWELLER'S ASSOCIATION, UDA, (KEBELE):</u> is the lowest administrative unit in an urban centre with its own jurisdiction. It is an association of urban dwellers (commonly known as Kebele) formed by the inhabitants, and usually constitutes a part of the urban centre.

<u>FARMER'S ASSOCIATION (FA)</u>: is the lowest administrative unit in a settled rural area with its own jurisdiction. It is an association of rural dwellers formed by the inhabitants of a given area whose members are engaged either in agricultural and/or non-agricultural activities.

ENUMERATION AREA (EA): is a unit of land delineated for the purpose of enumeration housing units and population without omission and duplication. An EA usually consists of 150 to 200 households in rural areas and 150 to 200 housing units in urban areas. An enumeration area should be related to a UDA or an FA in one of the following ways.

- An EA may be equal to an FA if the number of the households in the FA is less than
 or equal to 150 200 in rural areas; and is equal to a UDA in urban areas if the
 number of housing units in the UDA is 150 200.
- An EA may be a part of an FA or a UDA and its delineation cannot extend outside the boundary of the corresponding FA or a UDA.

<u>COLLECTIVE QUARTER</u>: A collective quarter is a premise (a housing unit, a building or a compound) in which a number of unrelated persons reside together, and share common facilities. Examples of collective quarters are monasteries, prisons, boarding schools, home for aged, children's homes, work camps, military barracks, etc. It is important to note that in the premises of some collective quarters, there may be private households.

<u>HOUSEHOLD</u>: Constitutes of a person or group of persons, irrespective of weather related or not who normally live together in the same housing unit or group of housing units and who have common cooking arrangements.

<u>HEAD OF HOUSEHOLD:</u> A head of a household is a person who economically supports or manages the household or for reasons of age or respect, is considered as head by members of the household or declares himself as head of a household. Head of a household could be male or female.

<u>MEMBER OF HOUSEHOLD</u>: Person constituting a household is called member of the household. The following are considered as members of a household:

- i) All persons who lived and ate with the household for at least six months including those who were not within the household at the time of the survey and were expected to be absent from the household for less than six months.
- ii) All guests and visitors who ate and stayed with the household for six months and more.
- iii) House maids, guards, baby-sitters, etc. who lived and ate with the household even for less than six months.

HOUSEHOLD SIZE: Is the total number of members of a household.

GROSS ENROLLMENT RATIO: is the total enrolment in a given level of school, regardless of age, per 100 children of that school age. For example, the gross enrolment ratio for primary level is defined as a quotient of the total number of pupils in grades 1–6 and the total population aged 7-12 years expressed as percentages.

<u>SCHOOL DROPOUT</u>: A person is considered to be a school dropout if he/she did not appear for the end of year examination or took the examination but did not register the following academic year.

AGE GRADE MISMATCH: is a measure of the age-grade slippage which gives the proportion /number of enrolled persons that are out of school age specified for each level of school (7-12 years for primary and 13-18 years for secondary).

<u>FACILITIES AND AMENITIES</u>: These are basic infrastructures such as food, markets, post office, telephone, school, health, drinking water and transport services etc.

<u>Z-SCORE</u>: A statistical measure of the distance, in standard deviation (SD) units, of a value from the mean.

2.3 Sampling Frame

The list of all households obtained from the 2007 Population and Housing Census was used as a frame to select the sample EAs in the rural and urban areas of the country. The frame from which

sample households were selected was based on a fresh list of households taken at the beginning of the survey period in each of the selected EAs.

2.4 Sample Design

For the purpose of representative sample selection the country was divided into four broad categories including rural category, major urban centers category medium and small size town's category.

Category I - Rural: This category consists of the rural areas of 68 zones and special weredas, which are considered as zones, in 8 regions of the country. This category also includes the rural part of both Harari region and Dire Dawa City Administration. The rural part of each Region including Harari and Dire Dawa City Administration were considered to be a survey domain (i.e. reporting level) for which the major findings of the survey are reported. This category totally comprises 10 reporting levels. A stratified two-stage cluster sample design in which the primary sampling units (PSUs) were EAs was used to select samples. Twelve households per sample EA were selected as a second Stage Sampling Unit (SSU) to which survey questionnaire were finally administered to the members of sampled households.

Category II - Major Urban Centers: In this category all regional capitals and five other major urban centers that have relatively larger population size (totally 15 urban centers) were included. Each of the 14 urban center and 10 Sub cities of Addis Ababa administration a total of 24 urban domains are taken us a reporting level. In this category too, a stratified two stage cluster sample design was adopted to select the primary sampling units (the EAs). Sixteen households from each of the primary sampling units (EAs) in each reporting level were then selected as a Second Stage Unit (SSU).

Category III & IV - Other Urban Centers: Urban centers in the country other than those under category II were grouped under these categories. A domain of other urban centers is formed for eight regions (excluding Harari, Addis Ababa and Dire Dawa administration). There is no domain in category III & IV for Harari, Addis Ababa and Dire Dawa administration as they do not have urban centers other than those grouped under category II. Unlike the above two

categories, a stratified three stage cluster sample design was adopted to select samples from these categories. The primary sampling unit was urban centers and the second stage sampling unit was EAs. Sixteen households from each of the selected EAs were finally selected as a third stage sampling unit.

2.5 Sample Size and Selection Scheme

Category I: A total of 864 EAs and 10,368 households were selected from this category. Sample EAs of each reporting level were selected using Probability Proportional to Size (PPS) with systematic sampling techniques; size being number of households obtained from the 2007 Population and Housing Census. Twelve households per EA were systematically selected from the fresh list of households prepared at the beginning of the survey.

Category II: In this category 576 EAs and 9,216 households were selected. Sample EAs from each reporting level in this category were also selected using probability proportional to size with systematic sampling techniques; size being number of households obtained from the 2007 Population and Housing Census. Sixteen households in each of the selected EAs were systematically selected from the fresh list of households prepared at the beginning of the survey.

Category III & IV: One hundred twelve urban centers, 528 EAs and 8,448 households were selected in these two categories. Urban centers from each domain as well as EAs in each urban center were selected systematically using probability proportional to size; size being the number of households obtained from the 2007 Population and Housing Census. Sixteen households in each of the selected EAs ultimately were systematically selected from the fresh list of households prepared at the beginning of the survey. In total, including region rural, region urban and country domains, a total of 66 reporting levels were formed under this design. Annex I provides estimation procedures of total, ratio and sampling errors, annex II provides the standard errors and CVs of selected variables, annex III distribution of planned and covered samples by region and annex IV the questionnaire in English version respectively.

ANNEX I ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERROR

ANNEX I: Estimation Procedures of Total, Ratio and Sampling Errors

The following formulas were used to estimate the required variables by reporting levels.

1. Estimate of Total \hat{Y}_h in Rural Domain (Category I)

$$\hat{Y}_{h} = \sum_{i=1}^{n_{h}} \frac{M_{h} H_{hi}}{n_{h} M_{hi} h_{hi}} \sum_{J=1}^{h_{hi}} Y_{hij} = \sum_{i=1}^{n_{h}} \sum_{j=1}^{h_{hi}} W_{hi} Y_{hij} - \dots$$
 (1)

Where,

$$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}}$$
 is the basic sampling weight

2. Estimate of Total \hat{Y}_h in Major Urban Domain (Category II)

$$\hat{Y}_{h} = \sum_{a=1}^{3} \sum_{i=1}^{n_{aih}} \sum_{i=1}^{h_{hai}} W_{hai} Y_{haij} \qquad (2)$$

Where,

$$W_{hai} = \frac{M_{ha}H_{hai}}{n_{ha}M_{hai}h_{hai}}$$
 is the basic sampling weight

3. Estimate of Total \hat{Y}_h in Other Urban Domain (Category III)

$$\hat{Y}_{h} = \sum_{i=1}^{n_{h}} \frac{M_{h}}{n_{h} n_{hi}} \sum_{j=1}^{n_{hi}} \frac{H_{hij}}{M_{hij} h_{hij}} \sum_{k=1}^{h_{hij}} Y_{hijk}$$

$$= \sum_{i=1}^{n_{h}} \sum_{j=1}^{n_{hi}} \sum_{k=1}^{h_{hij}} W_{hij} Y_{hijk}$$
(3)

Where,

$$W_{hij} = \frac{M_h H_{ij}}{n_h n_{hii} M_{hii} h_{hii}}$$
 is basic sampling weight

The following notations were used in the formula:

- $M_h = \text{Total number of households in stratum h obtained from the sampling frame.}$
- M_{hi} = Total number of households in EA/PSU i for rural and urban domain or in urban center/PSU i for other urban domain, stratum h obtained from the sampling frame.
 - n_k = Number of successfully covered sample EAs for rural domain in stratum h.
- H_{hi} = Total number of households obtained from the survey listing in sample EA/PSU i stratum h for rural domains.
- h_{hi} = Total number of households successfully covered in EA/PSU i stratum h for rural domain.
- M_{ha} = Total adjusted number of households of the domain in substrata a and stratum h obtained from the sampling frame
- H_{hai} = Total number of households obtained from the survey listing in EA/PSU i of substratum a and stratum h
- $n_{ha}=$ Number of successfully covered sample EAs/PSUs for major urban domain in substratum a and stratum h
- M_{hai} = Total number of households in EA/PSUi in substratum a and stratum hobtained from the sampling frame
- h_{hai} = Total number of sampled and covered households in sampled EA/PSU I substratum a and stratum h
- \hat{Y}_{haij} = The observed value of characteristic y for household j, in EA/PSUi, substratum a and stratum h of Major Urban Domain
- M_{hij} = Total number of households in EA/SSU j, urban centers/PSU i and stratum h obtained from the sampling frame for other urban center domain.
- n_{hi} = Number of sample EAs successfully covered in urban center/PSU i and stratum h for other urban center domain.
- H_{hij} = Total number of households obtained from the survey listing in EA/SSU j, urban center/PSU i and stratum h for other urban center domain

 h_{hij} = Number of sample households successfully covered in EA /SSU j, urban center/PSU i and stratum h for other urban center domain.

 Y_{hij} = The observed value of a characteristic y for household j in sampled EA/PSU i and stratum h for rural domain.

 Y_{hijk} = The observed value of a characteristic y for household k in EA/SSUj, urban center/PSU i and stratum h for other urban domain.

Note: Estimate of total at country level, \hat{Y} , is obtained by summing up stratum/domain total estimates.

$$\hat{Y} = \sum_{h=1} \hat{Y}_h$$

4. Sampling Variance of the Estimates:

Sampling variance of estimate of stratum total are given by the following formulas:

The variance of domain or reporting total estimate is:

$$V(\hat{Y}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} \hat{Y}_{hi}^2 - \frac{\hat{Y}_h^2}{n_h} \right] - \dots$$
 (4)

in which $\hat{Y}_{hi} = W_{hi} \sum_{i=1}^{h_{hi}} Y_{hij}$ for rural and major urban centers domains,

and
$$\hat{Y}_{hi} = \sum_{j=1}^{n_{hi}} W_{hij} \sum_{k=1}^{n_{hij}} y_{hijk}$$
 for other urban center domain.

$$V(\hat{Y}) = \sum_{h} V(\hat{Y}_h) - \dots$$
 (5)

$$SE(\hat{Y}_h) = \sqrt{Var(\hat{Y}_h)} - \dots$$
 (6)

5. Coefficient of Variation (CV) and Confidence Interval (CI)

The following formulas were used to calculate CV and CI of the domain (reporting level) total. The coefficient of variation (CV) of domain total in percentage is:

$$CV\left(\hat{Y}_{h}\right) = \frac{\sqrt{VAR(\hat{Y})}}{\hat{Y}} *100 \qquad (7)$$

And ninety-five percent confidence interval (CI) of domain total:

$$\hat{Y}_h \pm 1.96 * SE(\hat{Y}_h)$$
 ------(8)

6. Ratio Estimates:

$$\hat{R}_h = \frac{\hat{Y}_h}{\hat{X}_h} \text{ and } \hat{R} = \frac{\hat{Y}}{\hat{X}}$$
 (9)

Where, the numerator and the denominator are estimates of domain totals of characteristic y and x, respectively.

$$Var(\hat{R}_{h}) = \frac{1}{\hat{X}_{h}^{2}} \left[Var(\hat{Y}_{h}) + \hat{R}_{h}^{2} Var(\hat{X}_{h}) - 2\hat{R}_{h} Cov(\hat{Y}_{h}, \hat{X}_{h}) \right] - \dots (10)$$

In which

$$Cov(\hat{Y}_{h,}\hat{X}_{h}) = \frac{n_{h}}{n_{h}-1} \left[\sum_{i=1}^{n_{h}} \hat{Y}_{hi} \hat{X}_{hi} - \frac{\hat{Y}_{h} X_{h}}{n_{h}} \right] - \dots$$
 (11)

Estimates of standard error, coefficient of variation and confidence interval for the ratio estimate can be calculated by adopting formulas 6, 7 and 8.
